Critical Factors In Haemostasis Evaluaton And Development:

The Mongolian Gerbil Brain Avraham Mayevsky, 2024-09-10 The Mongolian gerbil brain lies in the anatomy of the blood vessels supplying blood to the brain In all mammals there is a special mechanism that compensates for the decreased blood flow to the brain in the case of development of stroke This mechanism is missing in the gerbil and therefore makes the Mongolian gerbil a unique model for stroke Dr Mayevsky adopted the gerbil as a model for stroke and his laboratory uniquely studied the mitochondria in the gerbil brain under various pathophysiological conditions This book describes the history of the Mongolian gerbil in research the brain energy metabolism and mitochondrial function and brain real time monitoring systems used in gerbils as well as the brain vasculature of the Mongolian gerbil Further the book includes chapters on brain multisite recording under brain perturbations multiparametric responses to brain activation and the effect of neuroprotectants on the gerbil brain This is an ideal book for research teams researching stroke and epilepsy

Toxicity Mechanisms of Environmental Pollutants and Health Risk Assessment Mahua Saha, Xiance Sun, Dan Xu, Pu Xia, 2025-08-19 Environmental pollution has

emerged as a significant risk that endangers both human health and ecosystems Various environmental pollutants have been linked to a wide range of toxicity and health outcomes closely associated with numerous human diseases Despite this our understanding of the genetic mechanisms and epigenetic modifications brought about by environmental pollutants on human health remains limited There is an urgent need to investigate the adverse effects of environmental pollutants on human health unravel the underlying mechanisms and assess public health risks Of particular concern are the emerging pollutants as they progressively pose greater hazards to human health and the environment It is necessary to thoroughly examine exposure assessment and health effects related to various environmental pollutants Furthermore it is very important for the identification of genetic and epigenetic biomarkers when exposed to environmental pollutants Thus this Research Topic serves as a platform to shed light on advanced mechanisms of toxicity public health risk assessment innovative control methods and novel processes for both traditional and emerging pollutants

Treatment and Prognostic Assessment of Liver Cirrhosis and Its Complications, Volume II Xingshun Qi,Andrea Mancuso,Thierry Thévenot,Yufu Tang, Hao Wu,2025-05-14

Given the success of Research Topic Treatment and Prognostic Assessment of Liver Cirrhosis and Its Complications and the rapidly evolving subject area we are pleased to announce the launch of Volume II About 2 million deaths worldwide annually are attributable to liver diseases Among them half die from cirrhosis and the other half from viral hepatitis and hepatocellular carcinoma When patients with liver cirrhosis develop to the decompensated stage a variety of complications will occur such as ascites spontaneous bacterial peritonitis variceal bleeding hepatic encephalopathy hepatorenal syndrome and jaundice which will seriously affect the patient s quality of life with reduced survival time and increased socioeconomic burden Therefore early assessment and clinical management of cirrhosis and its complications are crucial for both clinicians and patients

Biological Safety Factors in Toxicological Risk Assessment Canada. Environmental Health Directorate,1989 Traditional approaches to toxicity testing for environmental hazards have focused primarily on the determination of safe levels of exposure to toxic agents equated with the absence of toxic effects to the exposed human population This report gives the background to the development of this approach describes the concept of an acceptable daily intake and the safety factors involved presents alternative approaches to safety factor methods and describes safety factor approaches to carcinogens and teratogens

Principles and Processes for Evaluating Endocrine Disruption in Wildlife Ronald J. Kendall,1998 The Molecular Pathology of Cognitive Decline: Focus on Metals Paul A. Adlard,Roger Chung,2016-02-02 In the past two decades there have been significant advances made in understanding the cellular and molecular alterations that occur with brain ageing as well as with our understanding of age related brain diseases Ageing is associated with a mid life decline in many cognitive domains eg Attention working memory episodic memory that progresses with advancing age and which may be

potentiated by a variety of diseases However despite the breadth of attempts to explain it the underlying basis for age related memory impairment remains poorly understood Both normal and pathological ageing as in age related neurodegenerative disorders such as Alzheimer s disease may be associated with overlapping and increased levels of abnormal pathology and this may be a potential mediator of cognitive decline in both populations An emerging hypothesis in this field is that metal ion dys homeostasis may represent a primary unifying mechanism to explain age and disease associated memory impairment either indirectly via an effect on disease pathogenesis or by a direct effect on signaling pathways relevant to learning and memory There remains a concerted worldwide effort to deliver an effective therapeutic treatment for cognitive decline associated with ageing and or disease which is currently an unmet need There have been numerous clinical trials conducted specifically testing drugs to prevent cognitive decline and progression to dementia but to date the results have been less than impressive highlighting the urgent need for a greater understanding of the neurobiological basis of memory impairment in ageing and disease which can then drive the search for effective therapeutics
