## **Crop Reactions To Water And Temperature Stresses In Humid Temperate Climates:**

*Crop Reactions to Water and Temperature Stresses in Humid, Temperate Climates* C. David Raper, Paul Jackson Kramer, 1983      **Crop Reactions To Water And Temperature Stresses In Humid, Temperate Climates** Paul J Kramer, 2019-09-10 First published 1983 Aimed at improving agricultural production by providing a better understanding of the interaction between crops and the environment this book presents the latest research findings on the effects of water and temperature stresses on plants in humid temperate regions It also covers management practices and breeding programs that may reduce crop sensitivity to the vagaries of weather      *Proceedings of a Workshop on Crop Reactions to Water and Temperature Stresses in Humid, Temperate Climates* Temperate Climates Workshop on Crop Reactions to Water and Temperature Stresses in Humid (Durham, North Carolina, 1980), 1983      *Drought Resistance in Crops with Emphasis on Rice* International Rice Research Institute, 1982      *Crop Responses to Environment* Anthony E. Hall, 2018-02-19 Following in the tradition of its predecessor *Crop Responses to Environment* this fully updated and more comprehensive second edition describes aspects of crop responses to environment that are particularly relevant to the development of improved crop cultivars and management methods on a global scale It includes an extensive discussion of the difficulties in developing agricultural systems that accommodate increasing human needs for agricultural products during the twenty first century in a sustainable manner The book features new sections on adaptation to global climate change including adapting to global warming elevated atmospheric carbon dioxide concentration and increased flooding and salinity through plant breeding and changes in crop management Warming effects include stressful effects of heat on pollen development and reduced winter chilling effects on fruit and nut trees The book examines principles theories mathematical models and experimental observations concerning plant responses to environment that are relevant to the development of improved crop cultivars and management methods It illustrates the importance of considering emergent plant properties as well as reductionist approaches to understanding plant function and adaptation Plant physiological and developmental responses to light and temperature and plant water relations are considered in detail Dr Hall also describes climatic zone definitions based on temperature rainfall and evaporative demand in relation to plant adaptation and the prediction of crop water use Irrigation management and crop responses to salinity flooding and toxic levels of boron and aluminum are considered Crop responses to pests and diseases as they interact with crop responses to physical and chemical aspects of the environment are examined The book concludes with analyses illustrating the relevance of crop responses to environment to plant breeding

*Water-in-Plants Bibliography* J. Pospíšilová, J. Solárová, 2013-06-29 The ninth volume of *Water in Plants Bibliography* includes papers in all fields of plant water relations research which appeared during the year 1983 from theoretical considerations about the state of water in cells and its membrane transport to drought resistance of plants or physiological significance of irrigation In addition to papers devoted entirely to plant water relations papers on other topics are included if

they contain data on plant hydration level water vapour efflux rate of water uptake or water transport etc or if they contain valuable methodological information measurement of selected microclimatic factors soil moisture etc I We have tried to cover fully the relevant papers which have been published in important scientific periodicals and books Articles appeared in local journals mimeographed booklets abstracts of thesis and of symposia contributions etc were chosen mostly from reprints received directly from authors The courtesy of those is highly appreciated The manuscript is usually prepared in May and June of the year following the year which it covers Unfortunately some reprints come later and thus the respective references appear in the following volume with one year delay To maximize the value of the bibliography the references are arranged alphabetically according to the authors names and each volume is provided with three indexes     Infrared Thermometry to Evaluate Crop Water Status in a Subhumid Climate Hal David Werner, 1981     Current Topics in Plant Biochemistry and Physiology, 1983     Mechanisms of Plant Interactions in Mixtures and Monocultures of Corn and Sunflower, with Particular Reference to Water Alan Robert Berkowitz, 1986     **Vegetation and Macrofungi of Acid Oakwoods in the North-east of the Netherlands** Anna Elisabeth Jansen, 1984 nov in the Province of Drenthe in the Netherlands     *Annual Review of Phytopathology* Raymond G.
