Jackowe,2012 The study of both cadaveric axial cross sections and CT scans is the basis of 21st

century anatomy and the cornerstone of clinical diagnostics Modern medical imaging such as CT Computed Tomography scans produce 1 Dimensional anatomic cross sections of the axial plane Learning the proper sequence and orientation of axial cross sections and CT scans is often extremely challenging even for the most dedicated students of anatomy The shapes seen in the axial plane have little relation to the more familiar coronal plane Most texts abandon students to simply memorize the shapes seen at high yield vertebral levels or perform tricky mental gymnastics as they must mentally rotate the axial plane to the more familiar coronal Students are further frustrated when learning CT scans as the shapes seen in gray white CT slices have little relation to the anatomic structures from which they are derived This text serves to solve these problems by illustrating the sequence of axial cross sections and CT scans in unique 3 Dimensional illustrations This 3 D approach clearly demonstrates the relation of the shapes seen in cross sections and CTs to their more familiar coronal sagittal orientation The illustrations themselves have been done by Dr Jackowe in the classic style of Vesalius and Bourguery thus creating a work that is both informative and artistic the first aesthetic anatomy textbook for many years The atlas will serve as a review book suitable for self study and as a companion to standard anatomy textbooks It will appeal to medical anatomy students medical residents and radiologists as well as the general science reader who will appreciate the quality of the illustrations
