Dictionary On Lie Algebras And Superalgebras:

Dictionary on Lie Algebras and Superalgebras Luc Frappat, Antonino Sciarrino, Paul Sorba, 2000 This book is a detailed reference on Lie algebras and Lie superalgebras presented in the form of a dictionary It is intended to be useful to mathematical and theoretical physicists from the level of the graduate student upwards The Dictionary will serve as the reference of choice for practitioners and students alike Key Features Compiles and presents material currently scattered throughout numerous textbooks and specialist journal articles Dictionary format provides an easy to use reference on the essential topics concerning Lie algebras and Lie superalgebras Covers the structure of Lie algebras and Lie superalgebras and their finite dimensional representation theory Includes numerous tables of the properties of individual Lie algebras and Lie superalgebras

Non-Associative Algebras and Related Topics Helena Albuquerque, Jose Brox, Consuelo Martínez, Paulo Saraiva, 2023-07-28 This proceedings volume presents a selection of peer reviewed contributions from the Second Non Associative Algebras and Related Topics NAART II conference which was held at the University of Coimbra Portugal from July 18 22 2022 The conference was held in honor of mathematician Alberto Elduque who has made significant contributions to the study of non associative structures such as Lie Jordan and Leibniz algebras The papers in this volume are organized into four parts Lie algebras superalgebras and groups Leibniz algebras associative and Jordan algebras and other non associative structures They cover a variety of topics including classification problems special maps automorphisms derivations etc constructions that relate different structures and representation theory One of the unique features of NAART is that it is open to all topics related to non associative algebras including octonion algebras composite algebras Banach algebras connections with geometry applications in coding theory combinatorial problems and more This diversity allows researchers from a range of fields to find the conference subjects interesting and discover connections with their own areas even if they are not traditionally considered non associative algebraists Since its inception in 2011 NAART has been committed to fostering cross disciplinary connections in the study of non associative structures

Hopf Algebras, Quantum Groups and Yang-Baxter Equations Florin Felix Nichita, 2019-01-31 This book is a printed edition of the Special Issue Hopf Algebras Quantum Groups and Yang Baxter Equations that was published in Axioms

Supersymmetry in Mathematics and Physics Sergio Ferrara, Rita Fioresi, V.S. Varadarajan, 2011-08-27 Supersymmetry was created by the physicists in the 1970 s to give a unified treatment of fermions and bosons the basic constituents of matter Since then its mathematical structure has been recognized as that of a new development in geometry and mathematicians have busied themselves with exploring this aspect This volume collects recent advances in this field both from a physical and a mathematical point of view with an accent on a rigorous treatment of the various questions raised

Lie Algebras and Lie Groups Jean-Pierre Serre, 1992-03-11 This book reproduces J P Serre s 1964 Harvard lectures The aim is to introduce the reader to the Lie dictionary Lie algebras and Lie groups Special features of the presentation are its emphasis on formal groups in the Lie

group part and the use of analytic manifolds on p adic fields Some knowledge of algebra and calculus is required of the reader but the text is easily accessible to graduate students and to mathematicians at large

Lectures on Fuzzy and Fuzzy SUSY Physics A. P. Balachandran, Sachindeo Vaidya, 2007 Noncommutative geometry provides a powerful tool for regularizing quantum field theories in the form of fuzzy physics Fuzzy physics maintains symmetries has no fermion doubling problem and represents topological features efficiently These lecture notes provide a comprehensive introduction to the field Starting with the construction of fuzzy spaces using the concrete examples of the fuzzy sphere and fuzzy complex projective spaces the book moves on to discuss the technology of star products on noncommutative R^2 and on the fuzzy sphere Scalar spinor and gauge field theories as well as extended objects such as monopoles and nonlinear sigma modes are treated in considerable detail A detailed treatment of the regularization of supersymmetry is given using the techniques of fuzzy physics

High Energy Physics Amir H. Fariborz, 2003-11-11 There are four fundamental forces in nature gravitational electromagnetic weak and strong forces The last two are sometimes referred to as nuclear forces It is the main objective of high energy physics to explore these forces and hopefully unify them into one fundamental theory This goal has made high energy physics one of the most ambitious attractive challenging and powerful areas of physics and has attracted experts from other areas including pure and applied mathematics and computer science The MRST annual conference brings together senior and junior investigators and provides a friendly and stimulating atmosphere to discuss recent developments in high energy physics A broad range of topics in high energy physics was covered in this conference and therefore these proceedings will be very useful to both senior researchers as well as graduate students in high energy physics nuclear physics and computational physics providing most recent ideas techniques and directions for future research in this field

Automorphic Forms and Lie Superalgebras Urmie Ray, 2007-03-06 A principal ingredient in the proof of the Moonshine Theorem connecting the Monster group to modular forms is the infinite dimensional Lie algebra of physical states of a chiral string on an orbifold of a 26 dimensional torus called the Monster Lie algebra It is a Borcherds Kac Moody Lie algebra with Lorentzian root lattice and has an associated automorphic form having

a product expansion describing its structure Lie superalgebras are generalizations of Lie algebras useful for depicting supersymmetry the symmetry relating fermions and bosons Most known examples of Lie superalgebras with a related automorphic form such as the Fake Monster Lie algebra whose reflection group is given by the Leech lattice arise from super string theory and can be derived from lattice vertex algebras The No Ghost Theorem from dual resonance theory and a conjecture of Berger Li Sarnak on the eigenvalues of the hyperbolic Laplacian provide strong evidence that they are of rank at most 26 The aim of this book is to give the reader the tools to understand the ongoing classification and construction project of this class of Lie superalgebras and is ideal for a graduate course The necessary background is given within chapters or in appendices

Musson, 2012-04-04 Lie superalgebras are a natural generalization of Lie algebras having applications in geometry number theory gauge field theory and string theory This book develops the theory of Lie superalgebras their enveloping algebras and their representations The book begins with five chapters on the basic properties of Lie superalgebras including explicit constructions for all the classical simple Lie superalgebras Borel subalgebras which are more subtle in this setting are studied and described Contragredient Lie superalgebras are introduced allowing a unified approach to several results in particular to the existence of an invariant bilinear form on \mathfrak{g} The enveloping algebra of a finite dimensional Lie superalgebra is studied as an extension of the enveloping algebra of the even part of the superalgebra By developing general methods for studying such extensions important information on the algebraic structure is obtained particularly with regard to primitive ideals Fundamental results such as the Poincare Birkhoff Witt Theorem are established Representations of Lie superalgebras provide valuable tools for understanding the algebras themselves as well as being of primary interest in applications to other fields Two important classes of representations are the Verma modules and the finite dimensional representations The fundamental results here include the Jantzen filtration the Harish Chandra homomorphism the Sapovalov determinant supersymmetric polynomials and Schur Weyl duality Using these tools the center can be explicitly described in the general linear and orthosymplectic cases In an effort to make the presentation as self contained as possible some background material is included on Lie theory ring theory Hopf algebras and combinatorics *The Theory of Lie Superalgebras* M.
