Critical Issues in Weather Modification Research National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on the Status of and Future Directions in U.S. Weather Modification Research and Operations, 2004-01-16 The weather on planet Earth is a vital and sometimes fatal force in human affairs Efforts to control or reduce the harmful impacts of weather go back far in time In this the latest National Academies assessment of weather modification the committee was asked to assess the ability of current and proposed weather modification capabilities to provide beneficial impacts on water resource management and weather hazard mitigation It examines new technologies reviews advances in numerical modeling on the cloud and mesoscale and considers how improvements in computer capabilities might be applied to weather modification Critical Issues in Weather Modification Research examines the status of the science underlying weather modification in the United States It calls for a coordinated national research program to answer fundamental questions about basic atmospheric processes and to address other issues that are impeding progress in weather modification

Geoengineering Discourse Confronting Climate Change Brynna Jacobson, 2022-07-07 Geoengineering the idea of addressing climate change through large scale technological projects stands out among contested technologies in the degree to which its scope of possibilities and its premise are characterized by global existential risks Despite controversy this field has been shifting toward mainstream consideration *Geoengineering Discourse Confronting Climate Change The Move from Margins to Mainstream in Science News Media and Politics* examines the trajectory of geoengineering through critical discourse analysis of three key genres science policy reports news journalism and congressional hearings Brynna Jacobson explores how reports from distinguished scientific societies have constructed certain notions of legitimacy around geoengineering how narratives within news coverage have reflected and shaped the public discourse and understanding of geoengineering and how geoengineering has garnered political support from both major political parties in the United States Through analysis of discursive conventions within these genres the author reveals the evolution of notions of normalcy legitimacy and imperative around the field of geoengineering

The regulation of Geoengineering Great Britain: Parliament: House of Commons: Science and Technology Committee, 2010-03-18 Geoengineering describes activities specifically and deliberately designed to effect a change in the global climate with the aim of minimising or reversing anthropogenic climate change The Committee gives three reasons why they believe regulation is needed First in the future some geoengineering techniques may allow a single country to unilaterally affect the climate Second some geoengineering testing is already underway Third we may need geoengineering in the event of a failure to reduce greenhouse gases we are faced with highly disruptive climate change The Committee does

not call for an international treaty but for the groundwork for regulatory arrangements to begin The UN is the route by which eventually they envisage the regulatory framework operating but first the UK and other governments need to push geoengineering up the international agenda and get processes moving
