**Vision-Based Deep Learning: a Guidebook for High Schoolers** John Guibas, Tejpal Virdi, 2018-09-12 Artificial Intelligence AI is on track to shake up our lives in unimaginable ways from self driving cars to automated medical diagnosis there is a lot to consider in a world integrated with intelligent machines But even though the field is making leaps of progress there is still one pressing concern AI is only understood by a small fraction of the general population It may not be entirely obvious but AI has already seeped into our lives in numerous ways Google s personal assistant uses Natural Language Processing for human like communication Amazon utilizes purchase prediction to keep you buying more Twitter uses Machine Learning to personalize your timeline and the list goes on It is predicted that in the next 5 years 45% of companies are planning to use machine learning and by 2030 the AI industry will be worth 15 7 trillion with 33% of jobs being replaced by robots So what can you do to prepare for this fourth industrial revolution Become AI literate Although AI is catching the public eye it s happening in the wrong way The buzzword Artificial Intelligence is being overhyped to the point where it is seen as science fiction Even a large chunk of coverage on AI gives the impression that researchers have built generally intelligent robots that should be feared Sure that might be enthralling but the reality is that AI is not as magical nor intelligent as it is being portrayed It s important to understand that the theory and application of AI is not magic it s Math and Computer Science This isn t a big stretch from our current educational requirements With the spread of AI it is likely that the career one is pursuing will be assisted or possibly fully taken over by it Even fields that have numerous educational prerequisites such as Law and Medicine are being revolutionized by AI Consequently current freshman in high school who graduate college in 2026 will have a career dramatically impacted by AI and if not properly educated on it they will be at a severe disadvantage Especially with the growing role of AI in industry its illogical for schools to not keep up with it in terms of education This is a guidebook for high schoolers to learn the core concepts of deep learning which is the current most popular collection of techniques to create artificial intelligence The material is presented from the point of view of two high schoolers so it is only expected that the reader understands traditional high school math and computer science content We will take it from there
