Stepped Care 2.0: A Paradigm Shift in Mental Health Peter

Cornish, 2020-06-13 This book is a primer on Stepped Care 2.0 It is the first book in a series of three This primer addresses the increased demand for mental health care by supporting stakeholders help seekers providers and policy makers to collaborate in enhancing care outcomes through work that is both more meaningful and sustainable Our current mental health system is organized to offer highly intensive psychiatric and psychological care While undoubtedly effective demand far exceeds the supply for such specialized programming Many people seeking to improve their mental health do not need psychiatric medication or sophisticated psychotherapy A typical help seeker needs basic support For knee pain a nurse or physician might first recommend icing and resting the knee working to achieve a healthy weight and introducing low impact exercise before considering specialist care Unfortunately there is no parallel continuum of care for mental health and wellness As a result a person seeking the most basic support must line up and wait for the specialist along with those who may have very severe and or complex needs Why are there no lower intensity options One reason is fear and stigma A thorough assessment by a specialist is considered best practice After all what if we miss signs of suicide or potential harm to others A reasonable question on the surface however the premise is flawed First the risk of suicide or threat to others for those already seeking care is low Second our technical capacity to predict on these threats is virtually nil Finally assessment in our current culture of fear tends to focus more on the identification of deficits as opposed to functional capacities leading to over prescription of expensive remedies and lost opportunities for autonomy and self management Despite little evidence linking assessment to treatment outcomes and no evidence supporting our capacity to detect risk for harm we persist with lengthy intake assessments and automatic specialist referrals that delay care Before providers and policy makers can feel comfortable letting go of risk assessment however they need to understand the forces underlying the risk paradigm that dominates our society and restricts creative solutions for supporting those in need *Human Resource Information Systems*
