Intelligent Video Editing Automate Framework Using AI and Computer Vision Haolin Xie,Yu Sun,2022 At present
many video editing software have been created but what they all have in common is that they require manual work to edit
And it takes a lot of time and the user needs to watch each frame before editing In this paper we have developed a program
about AI intelligence The most important point of this software is that it can automatically focus the face of a person and edit
only selected clips of the person to make a complete video Users only need to prepare the video they want to edit and a photo
of the main character Then upload both to the software and AI Intelligence will automatically edit it providing the user with a
way to download and save it after editing the main character they need we applied our application to an example video using
the Marvel character Hawkeye as he appears in End Game and tried many experiments with the clip eventually we tried
many experiments with the clip and finally got a video of our selected character The results show that this software saves the
user a lot of time and is highly efficient All operations are carried out by AI **Movavi Video Editor 2025 For Beginners**
