Endler, 1976 Childhood Social Development Harry McGurk, 2022-02-22 This book provides an account of research in action and debate in progress in a selection of areas of childhood social development where significant progress is underway The chapters are written by an eminent group of British and American developmental psychologists each of whom has made primary contributions to research in the areas

covered in the volume The contributors were invited to reflect upon the current scene in social developmental research and to develop their own distinctive viewpoint and contribution to the field The book addresses issues in social development from infancy to adolescence The topics examined include interactions between biological and social factors in social development sex role development the development of friendships the role of peer interaction in social and cognitive development and the influence of cultural artifacts in the social and cognitive development of children Although each chapter is concerned with a different aspect of social development there are a number of themes that recur throughout the volume One concerns the nature of social development the acquisition of social understanding and the development of social skills are not individual achievements of children reared in isolation Rather they are the outcome of social processes in which the developing child engages sometimes in an unequal partnership with experienced adults at other times in more equal partnership with peers and playmates In both cases the development change is a constructive outcome A second recurrent theme is a concern for developmental researchers to take fuller account than they may traditionally have done of the nature of the cultural settings in which social development occurs Different cultures have different customs and artifacts and these can constrain development in different ways This issue is considered throughout the book and is the specific focus of the final chapter

Turk, 2012-12-06 We met because we both share the same views of language Language is a living organism produced by neural mechanisms relating in large numbers as a society Language exists between minds as a way of communicating between them not as an autonomous process The logical rules seem to us an epiphenomena of the neural mechanism rather than an essential component in language This view of language has been advocated by an increasing number of workers as the view that language is simply a collection of logical rules has had less and less success People like Yorick Wilks have been able to show in paper after paper that almost any rule which can be devised can be shown to have exceptions The meaning does not lie in the rules David Powers is a teacher of computer science Christopher Turk like many workers who have come into the field of AI Artificial Intelligence was originally trained in literature He moved into linguistics and then into computational linguistics In 1983 he took a sabbatical in Roger Shank's AI project in the Computer Science Department at Yale University Like an earlier visitor to the project John Searle from California Christopher Turk was increasingly uneasy at the view of language which was used at Yale
