Research Methods in Language Acquisition Barbara Lust, Maria Blume, 2016-11-07 Language acquisition research is challenging the intricate behavioral and cognitive foundations of speech are difficult to measure objectively The audible components of speech however are quantifiable and thus provide crucial data This practical guide synthesizes the authors' decades of experience into a comprehensive set of tools that will allow students and early career researchers in the field to design and conduct rigorous studies that produce reliable and valid speech data and interpretations The authors thoroughly review specific techniques for obtaining qualitative and quantitative speech data including how to tailor the testing environments for optimal results They explore observational tasks for collecting natural speech and experimental tasks for eliciting specific types of speech Language comprehension tasks are also reviewed so researchers can study participants' interpretations of speech and conceptualizations of grammar Most tasks are oriented towards children but special considerations for infants are also reviewed as well as multilingual children Chapters also provide strategies for transcribing and coding raw speech data into reliable data sets that can be scientifically analyzed

Furthermore they investigate the intricacies of interpretation so that researchers can make empirically sound inferences from their data and avoid common pitfalls that can lead to unscientific conclusions **A Grammar of Igala** Ejeba, Salem Ochala, 2017-01-17 The book establishes 28 phonemic consonants and 7 vowels as well as lexical and grammatical tones in Igala It shows the canonical syllable types as V and CV with no complexity and relates resyllabification to the retiming of segments as tone bearing units and the duration of their mora The work discusses nine word classes as well as ideophones and clitics in Igala There are splitting verbs of various structures and fully fledged pronouns with morphologically toneless clitic counterparts that are toned in their syntactic context among other elements of the Igala morphology The work establishes clitics as generally bearing the grammatical tones of various categories as a result of their morphological tonelessness and their availability for post lexical tone assignment It also accounts for the generally complex interaction of clitics and tones in the organisation of the morphosyntax and the tone syntax interface Igala has both verbal and nominal extensional affixes with various semantic features Some interesting discussions in the Igala syntax include the structural and functional types of serial verb constructions the detransitivizing process of verb movement in object demoting structures coreferentiality in relativised constituents and the future non future temporal distinction Complementary binominals are conjoined with a specified binominal morpheme and their rigidly irreversible structures have implications in the Igala semantics The binominals demonstrate a grammatically specified pattern defined over a conceptual space showing the network among conceptual categories such as kinship marital social hunter hunted more less and cause effect relationships as reflected in the Igala grammar **American Linguistics in Transition** Frederick J.
