## **Continuous Process Improvement Simplifying Work Flow Systems:**

**Continuous Process Improvement** George D. Robson, 2010-06-15 During the past decade Japanese companies have derived many of their competitive advantages from streamlined work flow processes. Desperate to replicate the Japanese systems, American managers have bought into countless theories advanced by management consultants which, lacking a methodology, have proved fruitless and frustrating. Now from inside a world renowned learning organization comes that methodology: Continuous Process Improvement. CPI is an improvement and problem prevention system created and developed by George Robson to empower natural work teams in three General Electric businesses. Composed of a logical set of steps at the heart of which is Process Flow Diagramming, CPI focuses on and simplifies the critical elements of work flow processes and eliminates those parts that add no value. Not only has this methodology helped these GE businesses save in excess of 35 million during the first two years of implementation, but similar techniques are now being employed by leading edge companies throughout the world. CPI is a transportable system that not only has profoundly changed manufacturing practices but has been applied with equal success in all areas of a business. Robson shows how the Iceberg Phenomenon can identify the measurable benefits of accurately accounting for direct and indirect costs by carefully tracking expenses. Planning for the true costs of customer service, marketing concessions, and retraining can turn unplanned losses into short and long term returns on investments. Robson focuses on activities that are critical to quality in design and production and demonstrates how non value added work can be eliminated. The staggering cost of rework calculated in The Rule of Tens is reduced by catching mistakes before they escape to subsequent stages of handling. The CPI system, which has been widely praised within General Electric, will be of broad interest throughout the business and university communities. **DoD**

**Performance Assessment Guide**, 1995 **Document Computing** Ross Wilkinson, Timothy Arnold-Moore, Michael Fuller, Ron Sacks-Davis, James Thom, Justin Zobel, 2012-12-06 Document Computing Technologies for Managing Electronic Document Collections discusses the important aspects of document computing and recommends technologies and techniques for document management with an emphasis on the processes that are appropriate when computers are used to create, access, and publish documents. This book includes descriptions of the nature of documents, their components and structure, and how they can be represented; examines how documents are used and controlled; explores the issues and factors affecting design and implementation of a document management strategy; and gives a detailed case study. The analysis and recommendations are grounded in the findings of the latest research. Document Computing Technologies for Managing Electronic Document Collections brings together concepts, research, and practice from diverse areas including document computing, information retrieval, librarianship, records management, and business process re-engineering. It will be of value to anyone working in these areas, whether as a researcher, a developer, or a user. Thomas Johnson, 2002-01-15 Building on his pathbreaking award winning bestseller *Relevance Lost* H Thomas Johnson presents a devastating critique of the top down hierarchical accounting systems that have dominated American corporations since the 1950s In *Relevance Regained* Johnson shows exactly how managing by remote control through results oriented accounting information has obstructed the real business objective to reduce process variation and lead times for the purpose of obtaining and keeping satisfied customers The failure of most American businesses to be competitive and profitable he contends is their reliance on management accounting information to control people's actions and productivity Cost focused imperatives from on high must be replaced Johnson asserts with information systems that link actions with imperatives of global competition Self managing work teams according to Johnson must own problem solving information to reduce variation delays and excess in processes Johnson prescribes the necessary changes in management principles that must

replace the outdated style associated with the industrial revolution Responsiveness to customers not accounting costs and flexibility reducing lead times and removing constraints are necessary for sustained competitive excellence and long term profitability Johnson discusses the radical overhauls of companies such as General Electric s work outs best practices program and Harley Davidson s work simplification programs and shows how these strong commitments to new strategies maximize a company s most important assets people and time To be globally competitive he claims a company s work must be directed toward selling to customers not just selling products
