Contemporary Trends in Nonlinear Geometric Control Theory and Its Applications A. Anzaldo-Meneses, 2002 Concerns contemporary trends in nonlinear geometric control theory and its applications Advances in Control Theory and Applications Claudio Bonivento, Alberto Isidori, Lorenzo Marconi, Carlo Rossi, 2007-06-04 This volume is the outcome of the first CASY workshop on Advances in Control Theory and Applications which was held at University of Bologna on May 22 26 2006 It consists of selected contributions by some of the invited speakers and contains recent results in control The volume is intended for engineers researchers and students in control engineering Nonlinear Observers and Applications Gildas Besançon, 2007-10-11 The purpose of this fantastically useful book is to lay out an overview on possible tools for state reconstruction in nonlinear systems Here basic observability notions and observer structures are recalled together with ingredients for advanced designs on this basis The problem of state reconstruction in dynamical systems known as observer problem is crucial for controlling or even merely monitoring processes For linear systems the theory has been well established for several years so this book attempts to tackle the problem for non linear systems Differential Equations, and Geometry Giovanni Falcone, 2017-09-19 This book collects a series of contributions addressing the various contexts in which the theory of Lie groups is applied A preliminary chapter serves the reader both as a basic reference source and as an ongoing thread that runs through the subsequent chapters From representation theory and Gerstenhaber algebras to control theory from differential equations to Finsler geometry and Lepage manifolds the book introduces young researchers in Mathematics to a wealth of different topics encouraging a multidisciplinary approach to research As such it is suitable for students in doctoral courses and will also benefit researchers who want to expand their field of interest. Bilinear Control Systems David Elliott, 2009-09-01 The mathematical theory of control became a eld of study half a century ago in attempts to clarify and organize some challenging practical problems and the methods used to solve them It is known for the breadth of the mathematics it uses and its cross disciplinary vigor Its literature which can befoundinSection93ofMathematicalReviews was atonetimedominated by the theory of linear control systems which mathematically are described by linear di erential equations forced by additive control inputs That theory led to well regarded numerical and symbolic computational packages for control analysis and design Nonlinear control problems are also important in these either the derlying dynamical system is nonlinear or the controls are applied in a nadditiveway Thelastfourdecadeshaveseenthedevelopment of theoretical work on nonlinear control problems based on di erential manifold theory nonlinear analysis and several other mathematical disciplines Many of the problems that had been solved in linear control theory plus others that are new and distinctly nonlinear have been addressed some resulting general de nitions and theorems are adapted in this book to the bilinear case **Automatic Control of Bioprocesses** Denis Dochain, 2013-03-01 Giving an overview of the challenges in the control of bioprocesses this comprehensive book presents key results in various

fields including dynamic modeling dynamic properties of bioprocess models software sensors designed for the on line estimation of parameters and state variables control and supervision of bioprocesses 

Computational Methods In The Fractional Calculus Of Variations Ricardo Almeida, Shakoor Pooseh, Delfim F M Torres, 2015-03-19 This book fills a gap in the literature by introducing numerical techniques to solve problems of fractional calculus of variations FCV In most cases finding the analytic solution to such problems is extremely difficult or even impossible and numerical methods need to be used The authors are well known researchers in the area of FCV and the book contains some of their recent results serving as a companion volume to Introduction to the Fractional Calculus of Variations by A B Malinowska and D F M Torres where analytical methods are presented to solve FCV problems After some preliminaries on the subject different techniques are presented in detail with numerous examples to help the reader to better understand the methods The techniques presented may be used not only to deal with FCV problems but also in other contexts of fractional calculus such as fractional differential equations and fractional optimal control It is suitable as an advanced book for graduate students in mathematics physics and engineering as well as for researchers interested in fractional calculus

Algebraic and Symbolic Computation Methods in Dynamical Systems Alban Quadrat, Eva Zerz, 2020-05-30 This book aims at reviewing recent progress in the direction of algebraic and symbolic computation methods for functional systems e g ODE systems differential time delay equations difference equations and integro differential equations. In the nineties modern algebraic theories were introduced in mathematical systems theory and in control theory Combined with real algebraic geometry which was previously introduced in control theory the past years have seen a flourishing development of algebraic methods in control theory One of the strengths of algebraic methods lies in their close connections to computations The use of the above mentioned algebraic theories in control theory has been an important source of motivation to develop effective versions of these theories when possible With the development of computer algebra and computer algebra systems symbolic methods for control theory have been developed over the past years. The goal of this book is to propose a partial state of the art in this direction To make recent results more easily accessible to a large audience the chapters include materials which survey the main mathematical methods and results and which are illustrated with explicit examples Algebraic Biology Hirokazu Anai, 2007-06-22 This volume constitutes the refereed proceedings of the Second International Conference on Algebraic Biology held at the Castle of Hagenberg Austria in July 2007 The conference was run as part of the Research Institute for Symbolic Computation RISC Summer 2007 Nineteen full papers are presented together with three invited papers and four tutorials Each paper has been carefully reviewed by the book s team of expert editors to ensure each one meets the highest standards of research and scholarship The conference served as an interdisciplinary forum for the presentation of research on all aspects of the application of symbolic computation in biology including computer algebra computational logic and related methods Papers also examine solutions to problems in biology using symbolic methods

Huijberts, 1998 The NOLCOS 98 is the fourth edition of the IFAC Nonlinear Control Systems Design Symposium which is organised every three years The symposium presented the state of the art in the design of nonlinear control systems It explored current theoretical developments as well as their latest applications to engineering problems The symposium provided a forum for the presentation and discussion of papers which described new design methodologies for the control of nonlinear plants and featured novel applications of these methods. The symposium included six plenary lectures and 30 sessions including five invited sessions. The range of topics under discussion included amongst others Applications of nonlinear control Algebraic theory of nonlinear systems Geometric theory of nonlinear systems Discrete time nonlinear control systems Stabilizability and feedback stabilization Nonlinear observers and filters Optimal control of nonlinear systems Variable structure systems Nonlinear robust and H Infinity control Adaptive control of nonlinear systems Singular perturbations in nonlinear control Expert control for nonlinear systems Computational methods for design and control Modeling and Simulation, 1990
