The Lottery Paradox Generalized?

Jake Chandler

ABSTRACT

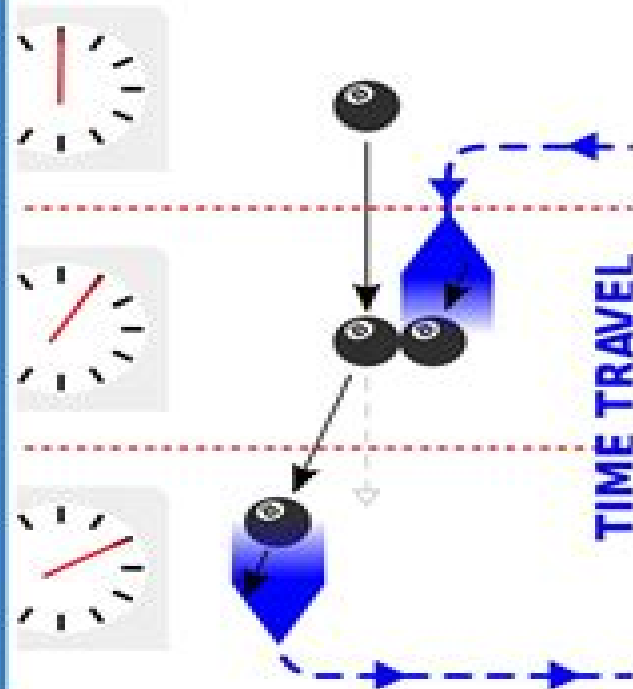

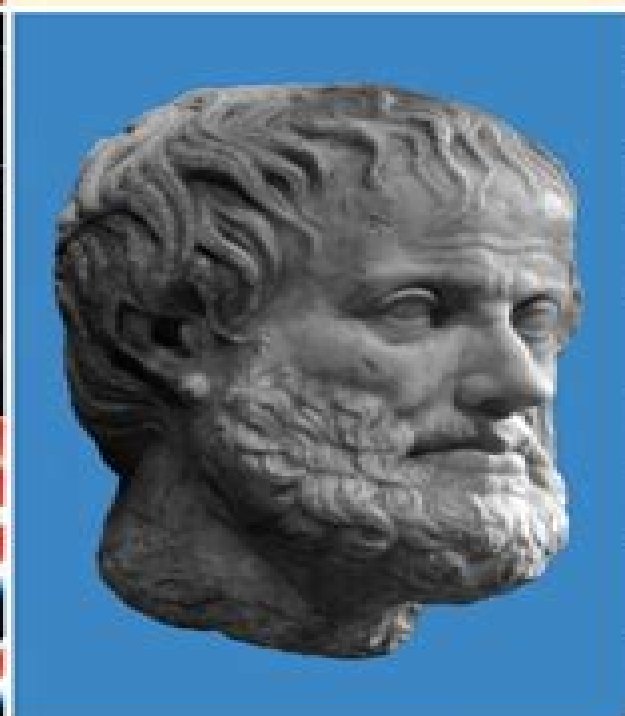

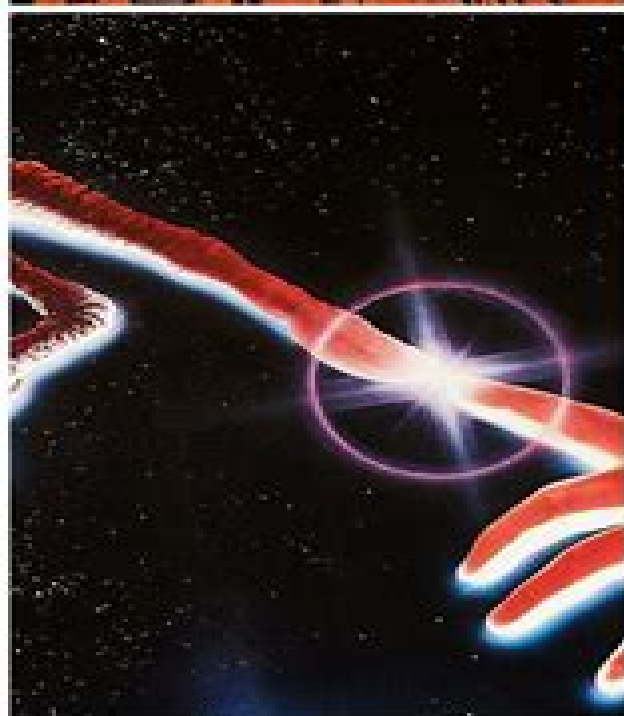

In a recent article, Sklar and Williamson offer both a critical and a constructive assessment of the lottery paradox, which they claim, with respect to a recent broader line of general acceptance, Sklar and Williamson can only in the end establish a solid case for a generalization of the lottery paradox to the fact that in certain cases, it is not rational to accept a proposition. This paper develops a new, if somewhat, better, or at least, more, a generalization of the lottery paradox to the fact that in certain cases, it is not rational to accept a proposition. The idea of a generalization of the lottery paradox is that in certain cases, it is not rational to accept a proposition. The idea of a generalization of the lottery paradox is that in certain cases, it is not rational to accept a proposition.

1. Probability and Acceptance

The idea that rational acceptance is probabilistic is in some ways an effort to be probabilistic. The idea would be that the rational acceptance of a proposition is a function of the probability of the proposition. The idea would be that the rational acceptance of a proposition is a function of the probability of the proposition. The idea would be that the rational acceptance of a proposition is a function of the probability of the proposition.

¹ In fact, the rational acceptance of a proposition is a function of the probability of the proposition.
