Contribution To The Theory Of Nonli 5vol:

Applied And Industrial Mathematics In Italy Ii - Selected Contributions From The 8th Simai Conference Vincenzo Cutello, Giorgio Fotia, Luigia Puccio, 2007-08-17 Industrial mathematics is evolving into an important branch of mathematics. Mathematicians in particular in Italy are becoming increasingly aware of this new trend and are engaged in bridging the gap between highly specialized mathematical research and the emerging demand for innovation from industry. The contributions in this volume provide both R D workers in industry with a general view of existing skills and academics with state of the art applications of mathematics to real world problems which may also be incorporated in advanced courses.

Control of Nonlinear and Hybrid Process Systems Panagiotis D. Christofides, Nael El-Farra, 2005-10-04 This monograph provides insight and fundamental understanding into the feedback control of nonlinear and hybrid process systems. It presents state of the art methods for the synthesis of nonlinear feedback controllers for nonlinear and hybrid systems with uncertainty constraints and time delays with numerous applications especially to chemical processes. It covers both state feedback and output feedback including state estimator design controller designs. *Control of Nonlinear and Hybrid Process Systems* includes numerous comments and remarks providing insight and fundamental understanding into the feedback control of nonlinear and hybrid systems as well as applications that demonstrate the implementation and effectiveness of the presented control methods. The book includes many detailed examples which can be easily modified by a control engineer to be tailored to a specific application. This book is useful for researchers in control systems theory graduate students pursuing their degree in control systems and control engineers.

H-infinity Control for Nonlinear Descriptor Systems He-Sheng Wang, Chee-Fai Yung, Fan-Ren Chang, 2006-01-18 The authors present a study of the H infinity control problem and related topics for descriptor systems described by a set of nonlinear differential algebraic equations. They derive necessary and sufficient conditions for the existence of a controller solving the standard nonlinear H infinity control problem considering both state and output feedback. One such condition for the output feedback control problem to be solvable is obtained in terms of Hamilton Jacobi inequalities and a weak coupling condition. A parameterization of output feedback controllers solving the problem is also provided. All of these results are then specialized to the linear case. The derivation of state space formulae for all controllers solving the standard H infinity control problem for descriptor systems is proposed. Among other important topics covered are balanced realization reduced order controller design and mixed H2 H infinity control. *H infinity Control for Nonlinear Descriptor Systems* provides a comprehensive introduction and easy access to advanced topics.

Assessment and Future Directions of Nonlinear Model Predictive Control Rolf Findeisen, Frank Allgöwer, Lorenz Biegler, 2007-09-08

The past three decades have seen rapid development in the area of model predictive control with respect to both theoretical and application aspects. Over these 30 years model predictive control for linear systems has been widely applied especially in the

area of process control. However, today's applications often require driving the process over a wide region and close to the boundaries of operability while satisfying constraints and achieving near optimal performance. Consequently, the application of linear control methods does not always lead to satisfactory performance and here nonlinear methods must be employed. This is one of the reasons why nonlinear model predictive control (NMPC) has enjoyed significant attention over the past years with a number of recent advances on both the theoretical and application frontier. Additionally, the widespread availability and steadily increasing power of today's computers as well as the development of specially tailored numerical solution methods for NMPC bring the practical applicability of NMPC within reach even for very fast systems. This has led to a series of new exciting developments along with new challenges in the area of NMPC.

Control and Observer Design for Nonlinear Finite and Infinite Dimensional Systems Thomas Meurer, Knut Graichen, Ernst-Dieter Gilles, 2005-09-19. This volume presents a well balanced combination of state of the art theoretical results in the field of nonlinear controller and observer design combined with industrial applications stemming from mechatronics, electrical, bio-chemical engineering and fluid dynamics. The unique combination of results of finite as well as infinite dimensional systems makes this book a remarkable contribution addressing postgraduate researchers and engineers both at universities and in industry. The contributions to this book were presented at the Symposium on Nonlinear Control and Observer Design: From Theory to Applications (SYNCOD) held September 15-16, 2005 at the University of Stuttgart, Germany. The conference and this book are dedicated to the 65th birthday of Prof. Dr.-Ing. Dr. h.c. Michael Zeitz to honor his life-long research and contributions on the fields of nonlinear control and observer design.

Identification of Nonlinear Systems Using Neural Networks and Polynomial Models Andrzej Janczak, 2004-11-18. This monograph systematically presents the existing identification methods of nonlinear systems using the block-oriented approach. It surveys various known approaches to the identification of Wiener and Hammerstein systems which are applicable to both neural network and polynomial models. The book gives a comparative study of their gradient approximation accuracy, computational complexity and convergence rates and furthermore presents some new and original methods concerning the model parameter adjusting with gradient-based techniques. Identification of Nonlinear Systems Using Neural Networks and Polynomial Models is useful for researchers, engineers and graduate students in nonlinear systems and neural network theory.

Scientific and Technical Books and Serials in Print, 1989. **Nonlinear Observers and Applications** Gildas Besançon, 2007-10-11. The purpose of this fantastically useful book is to lay out an overview on possible tools for state reconstruction in nonlinear systems. Here basic observability notions and observer structures are recalled together with ingredients for advanced designs on this basis. The problem of state reconstruction in dynamical systems known as observer problem is crucial for controlling or even merely monitoring processes. For linear systems the theory has been well established for several years so this book attempts to tackle the problem for nonlinear systems.
