Major Contributions of Humanistic, Psychodynamic and Biopsychology Theory to Psychology Essay

Humanistic

Humanistic, humanist and humanism all revolves around the psychological approach that studies the unique traits among humans together with their wholeness. An article by Mcleod, (2019) shows that the main idea depicted by Maslow and Rogers through their theory, people are responsible for their lives, actions, freedom and they have the decision to transform their behaviors and attitudes. The website Psychology Today (2019) supplements by stating that both Maslow and Rogers consider fulfillment in life and personal growth as a basic human cause; this means that every person, in a different manner, seeks to gain psychologically and continuous growth for self-enhancement.

Based on psychology point of view, the humanistic approach holds on personal worth, the creativity, and centrality of human values, together with the active, creative nature of human beings. The humanistic approach is optimistic and concentrates on the noble human capacity to overcome pain, hardship and despair. The dual humanistic psychologists support the idea that objective reality is less essentially compared to the personal subjective understanding and perception of the world. The humanistic approach is dubbed phenomenological, in view of psychology, it refers that the personality is studied from the individual's subjective experience point of view.

How Humanistic is used today

As argued in the website Psychology Today (2019), Humanistic approach is applicable in these contemporary times. The psychologist and psychiatrist use humanistic psychological approach for the humanistic therapy specifically to treat anxiety, depression, personality disorders, panic disorders, addiction, schizophrenia and relationship issues. In addition, humanistic therapy helps to treat low self-esteem persons, who have challenges of finding their purpose, searching for personal meaning, attaining their true potential, missing feelings of "wholeness" or who are not at ease with themselves.

Psychodynamic

Psychodynamic theory originates from the work by Sigmund Freud.

Major Contributions of Psychodynamic Theory to Psychology

The psychodynamic theory is significant to psychology in determining and curing the mental processes or emotional forces, particularly in the early childhood, and their effects on mental states and behavior (McLeod, 2017). According to Freud, people can be cured by making their unconscious thoughts and motivations to be conscious, and hence gaining insight. The psychodynamic approach comprises all the theories in psychology that create human functioning according to the interaction
