Control Dynamic Systems Volume 52 Advances:

Modelling and Parameter Estimation of Dynamic Systems J.R. Raol,G. Girija,J. Singh,2004-08-13 This book presents a detailed examination of the estimation techniques and modeling problems The theory is furnished with several illustrations and computer programs to promote better understanding of system modeling and parameter estimation **Advances in Unmanned Marine Vehicles** G.N. Roberts,R. Sutton,2006-01-31 Unmanned marine vehicles UMVs include autonomous underwater vehicles remotely operated vehicles semi submersibles and unmanned surface craft Considerable importance is being placed on the design and development of such vehicles as they provide cost effective solutions to a number of littoral coastal and offshore problems This book highlights the advanced technology that is evolving to meet the challenges being posed in this exciting and growing area of research **Advanced Motion Control and Sensing for Intelligent Vehicles** Li Li,Fei-Yue Wang,2007-11-24 Advanced Motion Control and Sensing for Intelligent Vehicles provides the latest information in intelligent vehicle control sensing and intelligent transportation It addresses the growing need for safe comfortable time and energy efficient modes of transportation with emphasis on the latest key findings current trends and likely future developments in this rapidly expanding field Highlights Discusses individual vehicle dynamics sensory and multiple ground vehicle interactions Includes systematic review of past and current research achievements Presents case studies in cutting edge directions such as vehicle steering motion vehicle vision systems cooperative driving intersection safety and tire pressure monitoring Assesses the likely future developments of this field This book is useful for both practicing engineers and researchers in the automotive industry Renewable Energy Systems Ahmad Taher Azar,Nashwa Ahmad Kamal,2021-09-09 Renewable Energy Systems Modelling Optimization and Control aims to cross pollinate recent advances in the study of renewable energy control systems by bringing together diverse scientific breakthroughs on the modeling control and optimization of renewable energy systems by leading researchers The book brings together the most comprehensive collection of modeling control theorems and optimization techniques to help solve many scientific issues for researchers in renewable energy and control engineering Many multidisciplinary applications are discussed including new fundamentals modeling analysis design realization and experimental results The book also covers new circuits and systems to help researchers solve many nonlinear problems This book fills the gaps between different interdisciplinary applications ranging from mathematical concepts modeling and analysis up to the realization and experimental work Covers modeling control theorems and optimization techniques which will solve many scientific issues for researchers in renewable energy Discusses many multidisciplinary applications with new fundamentals modeling analysis design realization and experimental results Includes new circuits and systems helping researchers solve many nonlinear problems Control Theory J.R. Leigh,2004 For students or professionals in science math or industry with or without a background in control theory explains and illustrates the basic concepts underlying the theory with references to more detailed treatments Intended as a companion to

more traditional approaches begins with simple concepts such as feedback and stability and advances to optimization distributed parameter systems and other complex ideas Annotation copyrighted by Book News Inc Portland OR
