## **Conformal Geometry And Quasiregular Mappings:**

**Conformal Geometry and Quasiregular Mappings** Matti Vuorinen, 2006-11-15 This book is an introduction to the theory of spatial quasiregular mappings intended for the uninitiated reader At the same time the book also addresses specialists in classical analysis and in particular geometric function theory The text leads the reader to the frontier of current research and covers some most recent developments in the subject previously scattered through the literature A major role in this monograph is played by certain conformal invariants which are solutions of extremal problems related to extremal lengths of curve families These invariants are then applied to prove sharp distortion theorems for quasiregular mappings One of these extremal problems of conformal geometry generalizes a classical two dimensional problem of O Teichmüller The novel feature of the exposition is the way in which conformal invariants are applied and the sharp results obtained should be of considerable interest even in the two dimensional particular case This book combines the features of a textbook and of a research monograph it is the first introduction to the subject available in English contains nearly a hundred exercises a survey of the subject as well as an extensive bibliography and finally a list of open problems Conformally Invariant

Metrics and Quasiconformal Mappings Parisa Hariri, Riku Klén, Matti Vuorinen, 2020-04-11 This book is an introduction to the theory of quasiconformal and quasiregular mappings in the euclidean  $n$  dimensional space where  $n$  is greater than 2 There are many ways to develop this theory as the literature shows The authors approach is based on the use of metrics in particular conformally invariant metrics which will have a key role throughout the whole book The intended readership consists of mathematicians from beginning graduate students to researchers The prerequisite requirements are modest only some familiarity with basic ideas of real and complex analysis is expected **Quasiconformal Space Mappings** Matti

Vuorinen, 2006-11-14 This volume is a collection of surveys on function theory in euclidean  $n$  dimensional spaces centered around the theme of quasiconformal space mappings These surveys cover or are related to several topics including inequalities for conformal invariants and extremal length distortion theorems  $L_p$  theory of quasiconformal maps nonlinear potential theory variational calculus value distribution theory of quasiregular maps topological properties of discrete open mappings the action of quasiconformal maps in special classes of domains and global injectivity theorems The present volume is the first collection of surveys on Quasiconformal Space Mappings since the origin of the theory in 1960 and this collection provides in compact form access to a wide spectrum of recent results due to well known specialists CONTENTS G D

Kulkarni, 1988 The contributions in this volume summarize parts of a seminar on conformal geometry which was held at the Max Planck Institut für Mathematik in Bonn during the academic year 1985-86 The intention of this seminar was to study conformal structures on manifolds from various viewpoints The motivation to publish seminar notes grew out of the fact that in spite of the basic importance of this field to many topics of current interest low dimensional topology analysis on manifolds there seems to be no coherent introduction to conformal geometry in the literature We have tried to make the material presented in this book self contained so it should be accessible to students with some background in differential geometry Moreover we hope that it will be useful as a reference and as a source of inspiration for further research Ravi Kulkarni Ulrich Pinkall Conformal Structures and Möbius Structures Ravi S Kulkarni Contents 0 Introduction 2 1 Conformal Structures 4 2 Conformal Change of a Metric Möbius Structures 8 3 Liouville's Theorem 12  $n$  4 The Groups  $M_n$  and  $M_E$  13 5 Connection with Hyperbolic Geometry 16 6 Constructions of Möbius Manifolds 21 7 Development and Holonomy 31 8 Ideal Boundary Classification of Möbius Structures 35 Partially supported by the Max Planck Institut für Mathematik Bonn and an NSF grant 2 0 Introduction 0 1 Historically the stereographic projection and the Mercator projection must have appeared to mathematicians very startling      *Conformal Invariants*,
