Conjectures And Refutations The Growth Of Scientific Knowledge Fourth Edition Revised:

Philosophical Dimensions in Mathematics Education Karen Francois, Jean Paul Van Bendegem, 2007-11-15 This book brings together diverse recent developments exploring philosophy of mathematics in education The unique combination of ethnomathematics philosophy history education statistics and mathematics offers a variety of different perspectives from which existing boundaries in mathematics education can be extended The ten chapters in this book offer a balance between philosophy of and philosophy in mathematics education Attention is paid to the implementation of a philosophy of mathematics within the mathematics curriculum to become a philosophy in mathematics education In doing so many chapters provide ideas for actual practice and some practical examples directly usable in teacher training and in mathematics classrooms

Knowledge and Reality P. Parrini, 2013-11-11 XIV The stability of a philosophical construction will depend not only upon the solidity of the blocks of the pillars and architraves that make it up but also upon the way in which all these parts are connected Of course it will not be possible to argue for every single part of a philosophical building to do so would mean to embark in a virtually endless enterprise Accordingly some of the parts of a philosophical building will have to be taken from the literature on the subject as ready made or semi finished elements while others will be argued for in the course of building This is what happened in my work too In some cases for instance in the case of epistemic relativism my concern was to illustrate theses which I believed to be sufficiently consolidated rather than to argue for them In other cases where I was directly engaged in building the theory that I want to formulate I did exactly the opposite This is what I have tried to achieve for example for those proper architraves of my construction viz the connection between scepticism and metaphysical realism and the thesis of the nonnative value of the fundamental epistemological notions truth objectivity and rationality

The Canonical Approach Noble, 2021-08-30 The Canonical Approach makes a detailed assessment of Brevard Childs canonical approach to biblical interpretation A careful analysis of Childs work identifies a number of historical hermeneutical and theological issues that are central both to Childs programme and to the wider methodological debate These include the adequacy of the historical critical tools their relationship to the more recent synchronic approaches the role of the interpreter's own presuppositions the viability of working from a specific faith commitment and ways in which the ancient texts can speak to the modern Church After an incisive discussion of these questions it is suggested how Childs programme can be set on a sounder methodological basis This book is particularly notable for its clarification of Childs approach and for its original solutions to a number of central methodological problems

The Death of Industrial Civilization Joel Jay Kassiola, 1990-08-14 The Death of Industrial Civilization explains how the contemporary ecological crisis within industrial society is caused by the values inherent in unlimited economic growth and competitive materialism Kassiola shows that the limits to growth critique of industrial civilization is the most effective stance against what seems to be a dominant and invincible social order He prescribes the social changes that must be implemented in order to transform

industrial society into a sustainable and more satisfying one

Popper and the Human Sciences G. Currie, A. Musgrave, 2012-12-06 Although Sir Karl Popper's contributions to a number of diverse areas of philosophy are widely appreciated serious criticism of his work has tended to focus on his philosophy of the natural sciences This volume contains twelve critical essays on Popper's contribution to what we have called the human sciences a category broad enough to include not only Popper's views on the methods of the social sciences but also his views on the relation of mind and body Freud's psychology and the status of cultural objects Most of our contributors are philosophers whose own work stands outside the Popperian framework We hope that this has resulted in a volume whose essays confront not merely the details of Popper's arguments but also the very presuppositions of his thinking With one exception the essays appear here for the first time The exception is L J Cohen's paper which is a revised and considerably expanded version of a paper first published in the British Journal for the Philosophy of Science for June 1980 We would like to thank Loraine Hawkins and Jane Hogg for their editorial assistance and June O'Donnell for typing various manuscripts and all the correspondence which a volume of essays entails

Popper Bryan Magee, 1973 Karl Popper has been acknowledged by professional colleagues as the most formidable living critic of Marxism as the greatest philosopher of science there has ever been as a thinker whose influence is acknowledged by men of action as well as by an almost bewildering variety of scholars and yet he remains comparatively unknown to the wider audience for whom this series is intended This book is therefore as timely as it is brilliant Bryan Magee demonstrates Popper's importance across the whole range of philosophy and in doing so provides a lively and up to date introduction to philosophy itself
