Acute and Long-Term Impact of COVID-19 on Mental Health of Children and Adolescents Kai Yuan,Yanping Bao,Yue  
 Leng,Xiaoyu Li,2023-11-13 The coronavirus disease 2019 COVID 19 epidemic has dramatically spread throughout the world  
 which has also caused mental health problems among the public especially vulnerable groups like children and adolescents  
 As a traumatic event the outbreak of COVID 19 might increase the prevalence of a series of mental health problems in  
 children and adolescents probably due to social distancing school closures as well as separation from parents and home  
 quarantine The continuing spreading of COVID 19 infection as well as vaccine uptake strategies quarantine policies and  
 health services during post epidemic era may also have a long lasting side effect on children and adolescents Children and  
 adolescents are in critical periods of neurodevelopment and once they develop mental health problems the long lasting  
 negative influence might span across their lifetime Moreover long term multisystem sequelae including neurological and  
 psychiatric systems of COVID 19 infection in children also compromise the development of physical and mental wellbeing in  
 adulthood Though there have been several studies on mental health consequences and long term impact on the mental health  
 of children and adolescents caused by COVID 19 there is still limited data and more comprehensive studies are needed on  
 this important topic     *"The Conquest of the Pole"* Frederick Albert Cook,1909
