

LEVELS OF CONSCIOUSNESS

All That Is | The One
Pure unmanifest energy existing in the NOW (present moment)

The **REFLECTIONS** of "all that is" create **consciousness (self-awareness)** of itself. This allows for an experience of itself from different perspectives.

LEVELS / DENSITIES OF CONSCIOUSNESS / SELF-AWARENESS

<div>↓</div> <div>OverSoul</div>	Simultaneous awareness of all the individual souls	Closest reflections/projections of "The One". They project into many individual souls			Non-Physical Plane / Dimensions	
<div>↓</div> <div>Individual Soul</div>	Simultaneous awareness of all it's in physical incarnations. Spirit Realms	Projects into physical incarnations with a general "theme" of exploration - based on collective experiences of previous incarnations.				Overlap between physical and non-physical planes
<div>↓</div> <div>Higher Mind</div>	It experiences and navigates through all parallel realities of its physical incarnation in the present moment.	It navigates through past, present, and future (time = illusion of continuum of parallel realities (as physical beings move through space).	<div>↷</div> <div>Passion, Excitement, Imagination / Intuition / Gut feeling, Synchronicity</div> <div>This is the channel of communication to and fro the physical mind and the higher mind.</div> <div>The higher mind sends guidance in alignment with the "theme of exploration" through feelings of passion/ excitement/ creativity, and awareness of "synchronicity in physical reality" to the physical mind to TAKE PHYSICAL ACTION on.</div> <div>The physical mind perceives this energy through a filter - the core belief system (negative or positive) - and takes a physical action.</div> <div>The higher mind sends necessary guidance in accordance with the energy of the - preferences (visualizations), beliefs, emotions, thoughts, and resulting actions of the physical state of being.</div> <div>↶</div>			
<div>↓</div> <div>Exploration Blueprint</div>	The higher mind further crystallizes a blue-print outlined of its physical incarnation	This basic blueprint is based on the "theme of experience" the individual soul chooses to experience. This is malleable and can be changed through heightened awareness, vision and action at the physical level.			<div>Physical Mind</div> <div>Ego personality - State of being - Behavior</div>	
<div>↓</div> <div>Collective Blueprint</div>	The collective blueprint of the experience, - looking into physical dimensions - so physical reality can be experienced.	Collective agreements about the nature of reality (game rules) of all the souls in this broad "theme" of experience - gravity, time, touch, smell, taste, sight, etc to breathe, genetic rules, etc				
<div>↓</div> <div>Individual Blueprint</div>	Individual agreements between the individual being and the collective blueprint	Based on the themes of exploration, - specific behaviors, unique physical and mental characteristics, preferences, etc				
<div>↓</div> <div>Beliefs</div>	Language of the deep unconscious mind - beliefs cause the individual perspective of physical reality. Emotions, thoughts, and actions follow the beliefs.	Beliefs are definitions picked up unconsciously or consciously from life experiences, that continuously self-perpetuate to reinforce themselves.				
<div>↓</div> <div>Emotions</div>	Language of the subconscious mind	The beliefs are translated to physical feelings that are experienced by the physical being - that can reinforce beliefs.	<div>Physical Plane / Dimensions</div>			
<div>↓</div> <div>Thoughts</div>	Language of the conscious mind / awareness. Thoughts primarily are in shapes and images. But due to the creation of language thoughts are in words too.	Emotions and feelings spontaneously create thoughts that reinforce them. Thoughts can also be consciously created at will.				
<div>↓</div> <div>Habits</div>	Universal patterns of emotions, thoughts, actions - behavior stemming from core beliefs.	Habitual behaviors are fortified through repetition. Once habits come into awareness - it is now a choice.

Consciousness Adam Zeman, 2004-01-01 A fascinating exploration of the nature of consciousness This engaging and readable book provides an introduction to consciousness that does justice both to the science and to the philosophy of consciousness that is the mechanics of the mind and the experience of awareness The book opens with a general discussion of the brain and of consciousness itself Then exploring the areas of brain science most likely to illuminate the basis of awareness Zeman focuses on the science of sleep and waking and on the science of vision He describes healthy states and disorders epilepsy narcolepsy blindsight and hallucinations after stroke that provide insights into the capacity for consciousness and into its contents And he tracks the evolution of the brain the human species and human culture and surveys the main current scientific theories of awareness pioneering attempts to explain how the brain gives rise to experience Zeman concludes by examining philosophical arguments about the nature of consciousness A practicing neurologist he animates his text with examples from the behavioral and neurological disorders of his patients and from the expanding mental worlds of young children including his own His book is an accessible and enlightening explanation of why we are conscious

Conscious Will and Responsibility Walter Sinnott-Armstrong, Lynn Nadel, 2011 We all seem to think that we do the acts we do because we consciously choose to do them This commonsense view is thrown into dispute by Benjamin Libet s eyebrow raising experiments which seem to suggest that conscious will occurs not before but after the start of brain activity that produces physical action Libet s striking results are often claimed to undermine traditional views of free will and moral responsibility and to have practical implications for criminal justice His work has also stimulated a flurry of further fascinating scientific research including findings in psychology by Dan Wegner and in neuroscience by John Dylan Haynes that raises novel questions about whether conscious will plays any causal role in action Critics respond that both commonsense views of action and traditional theories of moral and legal responsibility as well as free will can survive the scientific onslaught of Libet and his progeny To further this lively debate Walter Sinnott Armstrong and Lynn Nadel have brought together prominent experts in neuroscience psychology philosophy and law to discuss whether our conscious choices really cause our actions and what the answers to that question mean for how we view ourselves and how we should treat each other

Transitions Between

Consciousness and Unconsciousness Marcus Rothkirch, Morten Overgaard, Guido Hesselmann, 2018-03-13 Over the last years a large body of experimental data have been generated in the attempt to understand consciousness and its neural underpinnings In this respect particular interest has been paid to the attempt to distinguish between conscious experience and unconscious states which however may still be considered as mental states e g in virtue of their representational nature This is of course not without reason A deep understanding of that which specifically characterizes conscious states including neural correlates and cognitive functions may crucially inform the ambition of understanding the relation between experience and the physical world Nevertheless the question has historically been challenged by the fact that consciousness is available in the first person only not to other people including scientists Different methodological traditions and choices have led to quite different understandings of how conscious and unconscious states relate and diverse empirical work has been inspired and guided by various cognitive and neurobiological theories of consciousness The very diverse viewpoints include such different positions as the idea that unconscious states are associated with the very same functional characteristics as conscious states and the idea that no informational state that is available for action can be completely unconscious The Research Topic Transitions between consciousness and unconsciousness is therefore devoted to this particular question how to understand the relation and transition between consciousness and unconsciousness We hope that the reader will find the collected articles both informative and thought provoking and that this Research Topic will stimulate the scientific debate

Sternberg,2007-01-02 Right now someone in an artificial intelligence lab is fusing silicon circuitry in an attempt to engineer the human mind In a hospital a neurosurgeon is attempting to influence a patient s emotions by firing electrical impulses into his brain In a classroom a teacher is explaining how neurons in the brain interact to generate thoughts feelings and decisions The question of where consciousness comes from and how it works is likely the greatest mystery we face Despite progress in our knowledge of the brain we still don t know how it allows us to do things like enjoy a sunset solve a math problem or use our imagination For those of us who have ever thought about issues of the mind or free will these developments pose provocative questions What would happen if those mysterious processes could be understood Would a scientist be able to know everything about our minds just from studying the systems in our brains Could he predict how we will think and act After all the brain is an organ just like the heart or stomach and scientists can figure out when the heart will beat and when the stomach will release bile If such a thing could be accomplished would that make me a machine There are those who approach this question from a technological perspective Someday an engineer might be able to build a robot with my memories opinions and behavior Would that make me a machine This concise lucid primer on neuroscience and philosophy of mind takes the reader to the very depths of the mystery of consciousness exploring it through the eyes of key philosophers neuroscientists and technologists Avoiding jargon and oversimplification author Eliezer J Sternberg illuminates baffling questions of the brain mind and what it means to be human **Unconscious**
