Conservation Chemistry An Introduction:

Conservation Chemistry Ted Lister, Janet Renshaw, 2004 This book is divided into three sections dealing with the conservation of plastics stone and wood It provides teaching and learning materials that deal with familiar chemistry in an unfamiliar context it also helps to show how the chemical sciences play a part in many unexpected areas of life Many people think of objects made of plastic as throwaway and do not consider them as collectable items or ones that might be found in museums In fact there are increasing numbers of plastic objects in museums as well as in private collections and many are increasing in value To give just one example some Barbi TM dolls can change hands for thousands of pounds it is also a misconception that plastics do not decay easily many of them do and this raises issues about how best to preserve them This section is set in a context of the collection care identification and display of objects in museums and by private collectors The section on stone focuses on a case study In order to prevent damage to a stone object conservation scientists sometimes surround the object with filter paper soaked in pure water This is called poulticing Conservation scientists at the British Museum wanted to investigate the poulticing process to see how effective it was at removing salts and to find out whether previous treatment of the stone affected the efficiency of the removal process The section on wood focuses on the Mary Rose a wooden Tudor warship that sank off Portsmouth in 1545 In 1982 the hull was raised and since then has been undergoing conservation treatment in a former dry dock at Portsmouth Over 19 000 artefacts were recovered The material processed here looks at the chemistry of the decay processes and the methods used to conserve the wood of the Mary Rose s hull and some of the other materials involved *The Science For Conservators Series* The Conservation Unit Museums and Galleries Commission, 2008-05-20 For more than ten years The Science for Conservators Series has provided the key basic texts for conservators throughout the world Scientific concepts are basic to the conservation of artefacts of every type yet many conservators have little or no scientific training These introductory volumes provide non scientists with the essential theoretical background to their work Introduction to General Inorganic Chemistry Alexander Smith, 1906 **Science for Conservators** The Conservation Unit of the Museums & Galleries Commission, 1984 **The School of Mines Quarterly**, 1891 Introduction to Inorganic Chemistry Alexander Smith, 1906 Part I. - An Introduction to Modern Inorganic Chemistry John Newton Friend, 1914 Resources in Education, 1980-04 An Introduction to Materials Joyce Townsend, 2023 This new edition of An Introduction to Materials the first in the updated Science for Conservators series provides conservators and conservators in training with a very basic introduction to the language of chemistry and to the scientific approach Drawing on 40 years of experience as a conservation scientist Joyce Townsend takes readers through the elementary steps that will enable them to understand and investigate materials in historic objects and those modern materials used to conserve them in scientific terms The book also introduces basic chemistry concepts It provides worked examples and exercises throughout This new edition has been significantly expanded and updated with new material about

health and safety sustainability and the trend to use greener materials amongst other topics The book also includes all new illustrations a list of further reading and is accompanied by a companion website which features additional examples illustrations and more An Introduction to Materials assumes no previous scientific knowledge and will be essential reading for pre program applicants to and students already on postgraduate conservation programs worldwide It will also be useful to conservators who are looking to refresh their knowledge or to fill gaps in their training and for those who trained in languages other than English but now work in that language
