## **Confronting Environments Local Environmental Understanding In A Globalizing World:**

**Confronting Environments** James G. Carrier, 2004-10-17 6 x 9      *Globalization and the World Ocean* Peter Jacques, 2006-05-04 Jacques offers a unique analysis of the connections between global marine and atmospheric science to global political phenomena He shows how human survival is intricately linked to the sustainability of the world ocean a singular connected body of regional oceans that is by definition a global resource that touches all other ecosystems Jacques warns that the world ocean now offers evidence of several existential crises for global human populations including declining global fisheries coral reef losses and climate change but there has been a lack of global or regional cooperation in sustaining this complex ecosystem He suggests how we can synthesize and coordinate global ecological information exploring three regional areas in their local and global context the South Pacific Caribbean basin and Southeast Asia His book will be a valuable resource for researchers and students in environmental studies marine sciences and globalization studies      Global Capitalism and Climate Change Hans A. Baer, 2012-06-28 Many progressive scholars particularly in the social sciences have increasingly come to acknowledge that anthropogenic climate change constitutes yet another contradiction of global capitalism This book constitutes an effort to develop a critical social science of climate change one that posits its roots in global capitalism with its emphasis on profit making a treadmill of production and consumption heavy reliance on fossil fuels and commitment to ongoing economic expansion It explores the systemic changes necessary to create a more socially just and sustainable world system that would possibly start to move humanity toward a safer climate and discusses the role of a burgeoning climate movement in this effort      Computing Our Way to Paradise? Robert Rattle, 2010-01-16 Rattle's new book challenges key assumptions concerning the role of Internet and communication technologies ICTs in globalization processes The author argues that while globalization is predicated upon a strong extensive and interconnected global ICT network of products processes and services the real environmental and health benefits remain far from certain ICTs have been promoted as the next economic wave with the potential to generate jobs wealth and prosperity to surpass that of the industrial era It is assumed the environmental impacts will be negligible or even beneficial in this shift towards a service economy Rattle investigates these current and expected trends in ICTs and their potential contribution to sustainable development His book is an indispensable overview for researchers and instructors in globalization Internet communication technologies and environmental anthropology or sociology as well as a resource for policy makers in environmental protection sustainable development sustainable consumption and the social role of science and technology      *War and Nature* Jurgen Brauer, 2009-10-15 The inherent dangers of war zones constrain even the most ardent researchers with the consequence that little has been known for certain about the effects of war on stable environments War and Nature sifts through the available data from past wars to evaluate the actual impact that combat has on natural surroundings Examining conflicts of various kinds the long war in tropical Vietnam the relatively brief and highly technical wars in the Persian Gulf and various civil wars

in Africa and South Central Asia fought with small arms Brauer asks whether differences in technology location and duration are critical in causing environmental and humanitarian harm A number of unexpected conclusions are drawn from this data including practical agendas for collecting scientific evidence in future wars and suggestions about what the world's environmental and conservation organizations can do One thing War and Nature does is to show us how globalization can be a force harnessed for good ends

*The World's Scavengers* Martin Medina, 2007-05-03 Medina tells us that up to 2% of the urban population in developing countries survives by salvaging materials from waste for recycling which represents up to 64 million scavengers in the world today Despite these numbers we know little about the impact of scavenging on global capitalism development The author examines its historical evolution and its linkages with formal and informal sector productive activities in capitalist and non capitalist societies in case studies from Mexico Brazil Colombia Argentina Egypt the Philippines and India His new book radically alters popular perceptions on scavenging demonstrating that many widely held beliefs are wrong scavenging is not primarily the activity of the poor nor is it a strictly marginal activity the economic impact of scavenging is significant and can increase industrial competitiveness and scavenging can be compatible with a sustainable waste management system Scavenging represents an adaptive response to poverty yet at the same time it can be a resource to cities whose contributions should be recognized and understood

**Global Visions, Local Landscapes** Lisa L. Gezon, 2006 Gezon argues that local events continuously redefine and challenge global processes of land use and land degradation Her ethnographic study of Antankarana identifying rice farmers and cattle herders in northern Madagascar weaves together an analysis of remotely sensed images of land cover over time with ethnographies of situated negotiations between human actors Her book will be particularly valuable to researchers and students in anthropology geography sociology and environmental studies and those involved in conservation and resource management

Communities and Conservation J Peter Brosius, Anna Lowenhaupt Tsing, Charles Zerner, 2005-07-21 The distinguished environmentalists in this collection offer an in depth analysis and call to advocacy for community based natural resource management CBNRM Their overview of this transnational movement reveals important links between environmental management and social justice agendas for sustainable use of resources by local communities In this volume leaders who have been instrumental in creating and shaping CBNRM describe their model programs the countermapping movement and collective claims to land and resources legal strategies for gaining rights to resources and territories biodiversity conservation and land stabilization priorities and environmental justice and minority rights This book will be of value to instructors practitioners and activists in anthropology cultural geography environmental justice environmental policy political ecology indigenous rights conservation biology and CBNRM

*The Journal of Environment & Development*, 2006

**World in Motion** Gary M. Kroll, Richard H. Robbins, 2009 The essays collected in World in Motion all address the same issue The global paradox that modern prosperity has entailed extreme environmental degradation Gary M Kroll and Richard H Robbins present readings covering all principal

viewpoints on this matter from the neoliberal belief that environmental and social problems can be fixed through a growing economy to the critics of globalization who equate growth with environmental degradation This book asks an important question Can we simply accelerate growth under the assumption that increased prosperity and new technologies will allow us to reverse environmental damage Or do we need to transform our modes of living radically to maintain the health of the world around us **Facing the Global Environment Challenge** ,1995 *Current Publications in Legal and Related Fields* ,2004 Global Understandings Charlotte C.
