

Conjugate direction methods

- Best **general purpose** methods.
- Dealing with **general objective** functions.

- Area of **conjugate direction algorithms**.
 - **Great creativity.**
 - **Significant practical advances.**

Conjugate direction methods can be regarded as somewhat in between **steepest descent** and **Newton's method**, having the **positive features** of both of them.

Motivation: Desire to **accelerate slow convergence** of **steepest descent**, **but** avoid expensive evaluation, storage, and inversion of **Hessian as required by Newton's method**.

Application: Conjugate direction methods are invariably **invented** and **solved** for quadratic problem.

$$\text{minimize } \frac{1}{2}x^T Qx - b^T x$$

$Q = n \times n$ symmetric positive definite matrix.

Conjugate Direction Methods in Optimization M.R. Hestenes, 2012-12-06 Shortly after the end of World War II high speed digital computing machines were being developed It was clear that the mathematical aspects of computation needed to be reexamined in order to make efficient use of high speed digital computers for mathematical computations Accordingly under the leadership of Min a Rees John Curtiss and others an Institute for Numerical Analysis was set up at the University of California at Los Angeles under the sponsorship of the National Bureau of Standards A similar institute was formed at the National Bureau of Standards in Washington D C In 1949 J Barkeley Rosser became Director of the group at UCLA for a period of two years During this period we organized a seminar on the study of solutions of simultaneous linear equations and on the determination of eigen values G Forsythe W Karush C Lanczos T Motzkin L J Paige and others attended this seminar We discovered for example that even Gaussian elimination was not well understood from a machine point of view and that no effective machine oriented elimination algorithm had been developed During this period Lanczos developed his three term relationship and I had the good fortune of suggesting the method of conjugate gradients We discovered afterward that the basic ideas underlying the two procedures are essentially the same The concept of conjugacy was not new to me In a joint paper with G D *Conjugate Direction Methods in Optimization* Magnus Rudolph Hestenes, 1980

Nonlinear Conjugate Gradient Methods for Unconstrained Optimization Neculai Andrei, 2020-06-23 Two approaches are known for solving large scale unconstrained optimization problems the limited memory quasi Newton method truncated Newton method and the conjugate gradient method This is the first book to detail conjugate gradient methods showing their properties and convergence characteristics as well as their performance in solving large scale unconstrained optimization problems and applications Comparisons to the limited memory and truncated Newton methods are also discussed Topics studied in detail include linear conjugate gradient methods standard conjugate gradient methods acceleration of conjugate gradient methods hybrid modifications of the standard scheme memoryless BFGS preconditioned and three term Other conjugate gradient methods with clustering the eigenvalues or with the minimization of the condition number of the iteration matrix are also treated For each method the convergence analysis the computational performances and the comparisons versus other conjugate gradient methods are given The theory behind the conjugate gradient algorithms presented as a methodology is developed with a clear rigorous and friendly exposition the reader will gain an understanding of their properties and their convergence and will learn to develop and prove the convergence of his her own methods Numerous numerical studies are supplied with comparisons and comments on the behavior of conjugate gradient algorithms for solving a collection of 800 unconstrained optimization problems of different structures and complexities with the number of variables in the range 1000 10000 The book is addressed to all those interested in developing and using new advanced techniques for solving unconstrained optimization complex problems Mathematical programming researchers theoreticians and practitioners in
