## **Consciousness Intent And The Structure Of The Universe:**

**Consciousness, Intent, and the Structure of the Universe** Jeffrey Keen, 2005 A ground breaking book which challenges accepted beliefs by proving with scientific precision that consciousness involves more than just your brain and actually depends on the very fabric of the Universe Is this book the missing link that some scientists have been reluctant to accept Jeffrey Keen explores consciousness and its relation to the universe This book is the culmination of years of research work by Keen who has identified observed and measured universal energy fields that have not previously been detected either by the usual five senses or by existing scientific instruments Through his pioneering discoveries this book unquestionably demonstrates and explains the ancient mystery of dowsing and its connection to the cosmos Evidence is provided that there exists a universally pervading Information Field which is the current front runner in the evolution of understanding consciousness The book demonstrates that because the brain readily interacts with the Information Field there is a link between consciousness intent and the structure of the Universe quantum theory and other topics currently being researched in Physics All of the above has been achieved by using the orthodox scientific approach of involving geometry numbers universal constants ratios and measurement It is shown that the conscious mind extends over vast distances and is much more than just a physical brain within a skull The above interpretations of experimental results have fundamental significance This changes the way we see the Universe and should gradually produce a paradigm shift in the way we think comparable to us no longer believing that the Sun goes round the Earth in spite of it appearing to be obvious These are indeed exciting times

**The Mind's Interaction with the Laws of Physics and Cosmology** Jeffrey S Keen, 2019-01-14 This ground breaking book is about the emerging academic and practical study of subtle energies which historically have not been easy to detect The unique experiments numerous measurements and resulting data presented here have been collected over 30 years of research The findings have resulted from pioneering discoveries leading to equations graphs universal constants formulae and laws of nature that eventually connect to cosmology and the structure of the universe The book proves with high scientific and mathematical precision that consciousness involves more than just the brain but actually depends on the very fabric of the universe Some of the discoveries prove that certain information can be communicated across the solar system not only faster than light but instantaneously The book deals with the entanglement of large objects and the fact that the cosmos possesses a universal consciousness Also shown is that the mind can detect information from the outer planets and identifies connections to a five dimensional universe and the mysterious recently discovered dark energy This text will be of interest to the considerable number of people worldwide involved in similar studies These include researchers at universities and colleges currently or wishing to teach and develop this up and coming subject non professionals and members of relevant academic societies

**To the Other** Adriaan Theodoor Peperzak, 1993 The best introduction available for students of one of the most important philosophers of this century American Catholic

Philosophical Quarterly Philosophy     Life and Process Spyridon A. Koutroufinis, 2014-05-21 Alfred North Whitehead is arguably the most original 20th century philosopher of nature and metaphysics. In recent decades a number of physicists have produced ground breaking new theories in fundamental physics influenced by his process philosophy. In contrast few biologists are even aware that Whitehead's radical rethinking of the Cartesian assumptions implicit in 19th century sciences might be relevant to their enterprise. This book seeks to fill this gap by exploring how Whitehead's process ontology might provide a new philosophical foundation for the biosciences of the 21st century. The central premise shared by all of the volume's authors is the idea that all living processes are irreducible processes. Each chapter focuses on assumptions implicit in some of the core concepts of biology such as organism evolution information and teleology that play crucial explanatory roles in the biosciences but as metaphysical concepts fall outside its purview. The authors each identify important shortcomings implicit in contemporary biological paradigms and show how an approach grounded in a process oriented metaphysics can avoid them.

**Life in dream** Manhiel Marthin, 2025-03-17 What does it truly mean to live? Is it simply existing in the physical world that we perceive through our senses or is there something deeper underlying our daily experience? This book invites you to explore these questions from a transformative perspective. Consciousness as the central axis of all reality. Throughout these pages you will discover how our beliefs, emotions and internal states not only influence our perception of the world but also act as creative forces that shape our existence. This work is divided into four main parts, each designed to delve into fundamental aspects of the relationship between consciousness and reality. The origins of consciousness and reality. Here we will explore metaphysical concepts about the primordial nature of consciousness and its role as a creative source. We will examine how the soul manifests in the physical world and how the ego acts as an intermediary in what we might call the dream of life. The structure of reality. We will analyse the interconnected forces that shape our universe from geometric and mathematical principles to quantum physics and multiple realities. We will also investigate how our choices create timelines and alternative realities. Conscious navigation between realities. You will learn practical techniques to expand your perception and explore different dimensions of existence. From altered states of consciousness to the integration of multidimensional experiences you will discover how to become an active creator of your own reality. The journey toward the expansion of consciousness. Finally we will reflect on the power of free will, conscious responsibility and connection with our higher self. This process will not only transform your understanding of the world but also your relationship with it. Throughout the book you will be accompanied by practical examples, illustrative analogies and useful tools to apply these concepts in your daily life. My intention is not to offer you definitive answers but to inspire you to question your most deeply held beliefs and open yourself to new possibilities. This is a call to personal exploration, a journey toward the expansion of consciousness that will allow you to rediscover your power as a co-creator of your reality. So if you are ready to step into a world where imagination, science and spirituality converge, welcome. Prepare to question what you

know to experience the unknown and above all to embrace your role as a conscious protagonist of your own existence
