Consciousness Redux:

Scientific Approaches to Consciousness Jonathan D. Cohen, Jonathan W. Schooler, 2014-04-04 There are many ways to approach the understanding of consciousness. Questions about these ways have occupied philosophers and metaphysicians for centuries. During the early growth of cognitive science, the problem of consciousness remained taboo, but an increasing number of studies have either implicitly or explicitly begun to bear on its nature. These have been inspired by a number of different original questions and focus on a variety of different empirical phenomena. Thus studies of implicit memory, subliminal processing, strategic versus automatic processing, allocation of attention, and differences between information processes in the awake versus dreaming state all share a common assumption of a particular quality or state: awareness. Awareness, alertness, namely consciousness, that somehow can be distinguished from another type of state or states in which the subject is not aware of the information being processed. What distinguishes the cognitive psychological and cognitive neuroscience approach to the question of consciousness from that of philosophy and metaphysics is scientific methodology: a set of tools that permit the empirical study of a phenomenon in an objective and reproducible way. Recent developments in both the empirical and theoretical methodologies of these fields have made it possible to begin to study the phenomenon associated with, if not directly underlying, consciousness in a scientific fashion. This volume tries to resolve the difficulties associated with the scientific investigation of consciousness. The intent is to explore the extent to which consciousness can be the target of direct scientific inquiry, to get on the table some of the relevant work, and consider the degree to which this research can help inform our understanding of consciousness. It brings together a group of cognitive and neuroscientists to share relevant recent research in the fields of cognitive science and neuroscience and to determine whether any new strategies for the scientific pursuit of this question can be developed. A long term goal is the development of a unified understanding of consciousness, scientific as well as philosophical perspectives. This volume takes the first step toward building the necessary local bridges.

Consciousness Redux Martin H. Stein, 1998 Presents a selection of the papers of a beloved teacher and mentor by several of his students and collaborators.

The Bloomsbury Companion to the Philosophy of Consciousness Dale Jacquette, 2018-01-25 From Descartes and Cartesian mind/body dualism in the 17th century through to 21st century concerns about artificial intelligence programming. *The Bloomsbury Companion to the Philosophy of Consciousness* presents a compelling history and up to date overview of this burgeoning subject area. Acknowledging that many of the original concepts of consciousness studies are found in writings of past thinkers, it begins with introductory overviews to the thought of Descartes through to Kant, covering Brentano's restoration of empiricism to philosophical psychology and the major figures of the late 19th and early 20th centuries: Russell, Wittgenstein, Ryle, and James. These opening chapters on the forces in the history of consciousness lay the groundwork needed to understand how influential contemporary thinkers in the philosophy of mind interpret the concept of consciousness. Featuring leading figures in the field.

Part II discusses current issues in a range of topics progressing from the so called hard problem of understanding the nature of consciousness to the methodology of invoking the possibility of philosophical zombies and the prospects of reductivism in philosophy of mind Part III is dedicated to new research directions in the philosophy of consciousness including chapters on experiment objections to functionalism and the scope and limits of artificial intelligence Equipped with practical research resources including an annotated bibliography a research guide and a glossary The Bloomsbury Companion to the Philosophy of Consciousness is an authoritative guide for studying the past present and future of consciousness

The Feeling of Life Itself Christof Koch, 2020-09-08 A thought provoking argument that consciousness more widespread than previously assumed is the feeling of being alive not a type of computation or a clever hack In The Feeling of Life Itself Christof Koch offers a straightforward definition of consciousness as any subjective experience from the most mundane to the most exalted the feeling of being alive Psychologists study which cognitive operations underpin a given conscious perception Neuroscientists track the neural correlates of consciousness in the brain the organ of the mind But why the brain and not say the liver How can the brain three pounds of highly excitable matter a piece of furniture in the universe subject to the same laws of physics as any other piece give rise to subjective experience Koch argues that what is needed to answer these questions is a quantitative theory that starts with experience and proceeds to the brain In The Feeling of Life Itself Koch outlines such a theory based on integrated information Koch describes how the theory explains many facts about the neurology of consciousness and how it has been used to build a clinically useful consciousness meter The theory predicts that many and perhaps all animals experience the sights and sounds of life consciousness is much more widespread than conventionally assumed Contrary to received wisdom however Koch argues that programmable computers will not have consciousness Even a perfect software model of the brain is not conscious Its simulation is fake consciousness Consciousness is not a special type of computation it is not a clever hack Consciousness is about being

Biologising the Social Sciences David Canter, David Turner, 2015-02-20 You can hardly open a paper or read an academic journal without some attempt to explain an aspect of human behaviour or experience by reference to neuroscience biological or evolutionary processes This biologising has had rather a free ride until now being generally accepted by the public at large However there is a growing number of scholars who are challenging the assumption that we are little more than our bodies and animal origins This volume brings together a review of these emerging critiques expressed by an international range of senior academics from across the social sciences Their arguments are firmly based in the empirical scientific tradition They show the lack of logic or evidence for many biologising claims as well as the damaging effects these biological assumptions can have on issues such as dealing with dyslexia or treating alcoholism This important book originally published as a special issue of Contemporary Social Science contributes to a crucial debate on what it means to be human This collection of articles by David Canter and his colleagues rigorously argued and richly informative are of immense importance It is astonishing that as Canter puts it in

his brilliant overview of biologising trends there are those in the humanities who need to be reminded that human beings can talk and interact with each other generating cultures and societies that have an existence that cannot be reduced to their mere mechanical parts Professor Raymond Tallis FRCP FMedSci DLitt LittD in the Preface

Unbounded Consciousness Ming Singer, 2001 The enigma of consciousness fascinates psychologists philosophers neuroscientists and physicists The author of this book is interested in the qualitative aspects of consciousness known by the philosophical term qualia In this book she puts forward an original and integrative theory of consciousness that argues for the inseparability of qualitative and non qualitative aspects and for the restoration of the concept of psyche

The Cumulative Book Index, 1999 **Human Nature Explored** George Mandler, 1997 What exactly is human nature Are we correct in accepting ourselves as unchangeable determined by biology or is this idea an obstacle to our cognitive emotional and evolutionary development George Mandler explores these questions from a fresh evolutionary and social perspective He examines the burgeoning field of evolutionary psychology and suggests a mid course correction Topics are approached from a variety of backgrounds drawing on relevant literature and Mandler's own research He begins with what we know about evolution and gene expression then moves on to the complex phenomena of consciousness and emotion The constraints of both nature and nurture are discussed as limiting forces on human development and natural selection is considered in the context of our social fabric which draws on both psychological and anthropological knowledge Mandler considers human difference particularly in regard to intelligence and gender and discusses the nature of human values including our need for morality and freedom The book concludes with an appraisal of human cognition and language

Moving Images, Culture, and the Mind Ib Bondebjerg, 2000 Since the rise of cinema in 1896 moving images have been of increased importance in the construction of culture and society and for the ways in which we interact with reality and with each other With the coming of television on a global mass scale in the 1960s and the birth of computers and the information society in the 1980s we are right now in an expanding and changing culture highly influenced by visual media

Self-representational Approaches to Consciousness Uriah Kriegel, Kenneth Williford, 2006 Leading theorists examine the self representational theory of consciousness as an alternative to the two dominant reductive theories of consciousness the representational theory of consciousness and the higher order monitoring theory In this pioneering collection of essays leading theorists examine the self representational theory of consciousness which holds that consciousness always involves some form of self awareness The self representational theory of consciousness stands as an alternative to the two dominant reductive theories of consciousness the representational theory of consciousness RTC and the higher order monitoring HOM theory combining elements of both RTC and HOM theory in a novel fashion that may avoid the fundamental deficiencies of

each Although self representationalist views have been common throughout the history of both Western and Eastern philosophy they have been largely neglected in the recent literature on consciousness This book approaches the self representational theory from a range of perspectives with contributions from scholars in analytic philosophy phenomenology and history of philosophy as well as two longer essays by Antonio Damasio and David Rudrauf and Douglas Hofstadter The book opens with six essays that argue broadly in favor of self representationalist views which are followed by five that argue broadly against them Contributors next consider connections to such philosophical issues as the nature of propositional attitudes knowledge attention and indexical reference Finally Damasio and Rudrauf link consciousness as lived with consciousness as described in neurobiological terms and Hofstadter compares consciousness to the strange loop of mathematical self reference brought to light by G del s incompleteness theorems Contributors Andrew Brook Peter Carruthers Antonio Damasio John J Drummond Jason Ford Rocco J Gennaro George Graham Christopher S Hill Douglas R Hofstadter Terry Horgan Tomis Kapitan Uriah Kriegel Keith Lehrer Joseph Levine Robert W Lurz David Rudrauf David Woodruff Smith John Tienison Robert Van Gulick Kathleen Wider Kenneth Williford Dan Zahavi A Dialogue on Consciousness Torin Alter,2009-11-05 The book explores the philosophy of mind debate about whether consciousness is a physical or nonphysical phenomenon by using two main characters Tollens and Ponens unemployed graduate students who secretly live in a university library These characters examine the most significant theories and arguments in the field quoting key passages from both classic and contemporary texts Their discussion encompasses an expansive and diverse range of ideas from those that originated in the Enlightenment up to today s most current perspectives The dialogue considers the pros and cons of modern physicalist views and nonphysicalist alternatives **The British National Bibliography** Arthur James Wells,1999 **Gestalt Theory** ,1998 **American Book Publishing Record Cumulative 1998** R R Bowker Publishing,1999-03 **The Living Age** ,1884
