Contemporary Communication Systems Using MATLAB and Simulink John G. Proakis, Masoud Salehi, Gerhard Bauch, 2004 Featuring a variety of applications that motivate students this book serves as a companion or supplement to any of the comprehensive textbooks in communication systems The book provides a variety of exercises that may be solved on the computer using MATLAB The authors assume that the student is familiar with the fundamentals of MATLAB By design the treatment of the various topics is brief The authors provide the motivation and a short introduction to each topic establish the necessary notation and then illustrate the basic concepts by means of an example

Contemporary Communication Systems Using MATLAB John G. Proakis, Masoud Salehi, 2000 This supplement to any standard communication systems text is one of the first books to successfully integrate the use of MATLAB in the study of communication systems concepts and problems It has been developed for instructors and students who wish to make use of MATLAB as an integral part of their study The former will find the means by which to use MATLAB as a powerful tool to motivate students and illustrate essential theory without having to customize the applications themselves the latter will find relevant problems quickly and easily The book includes numerous MATLAB based simulations and examples of communication systems while providing a good balance of theory and hands on computer experience This Updated Printing revises the book and MATLAB files available for downloading from the Brooks Cole Bookware Companion Resource Center Web Site to MATLAB V5

Communication System Design Using DSP Algorithms Steven A. Tretter, 2003-01-31 Designed for senior electrical engineering students this textbook explores the theoretical concepts of digital signal processing and communication systems by presenting laboratory experiments using real time DSP hardware The experiments are designed for the Texas Instruments TMS320C6701 Evaluation Module or TMS320C6711 DSK but can easily be adapted to other DSP boards Each chapter begins with a presentation of the required theory and concludes with instructions for performing experiments to implement the theory In the process of performing the experiments students gain experience in working with software tools and equipment commonly used in industry

Digital Signal Processing with Matlab Examples, Volume 1 Jose Maria Giron-Sierra, 2016-11-19 This is the first volume in a trilogy on modern Signal Processing The three books provide a concise exposition of signal processing topics and a guide to support individual practical exploration based on MATLAB programs This book includes MATLAB codes to illustrate each of the main steps of the theory offering a self contained guide suitable for independent study The code is embedded in the text helping readers to put into practice the ideas and methods discussed The book is divided into three parts the first of which introduces readers to

periodic and non periodic signals The second part is devoted to filtering which is an important and commonly used application The third part addresses more advanced topics including the analysis of real world non stationary signals and data e g structural fatigue earthquakes electro encephalograms birdsong etc The book s last chapter focuses on modulation an example of the intentional use of non stationary signals

Discrete Systems Laboratory Using MATLAB Martin Schetzen, Vinay K. Ingle, 2000 This brief paperbound supplement provides 16 hands on laboratory experiments that students can perform using MATLAB in lab sections that accompany lecture courses in Linear Systems or DSP The 16 experiments are grouped in four main topic areas sampling and digital to analog D A conversion the discrete time Fourier transform gain and phase shift studies of digital

filters and analog to digital A/D quantization See TOC below for a listing of specific lab experiments The goal of these experiments is to enable students to understand the full physical significance of key concepts through a deeper understanding of the underlying mathematical formulas not to teach MATLAB In each experiment students enter problem parameter values plot the results using MATLAB's powerful plotting functions and then respond to questions in the manual that require them to analyze and interpret these results The experiments challenge students to approach the study of these topics in the role of an experimental investigator students are required to define the quantitative values and size properties of each design criterion in a problem As a result students develop an appreciation of the physical meaning of the derived results their theoretical and physical implications and the use of the scientific method

Simulations of Machines Using MATLAB and Simulink John Francis Gardner, 2001 This book is intended as a supplement for undergraduate courses in Kinematics or Dynamics of Mechanisms taught in Mechanical Engineering departments As a MATLAB supplement it can be used with any standard textbook including Norton's DESIGN OF MACHINERY Second Edition Erdman Sandor's MECHANISMS DESIGN Third Edition or Mabie Reinholtz MECHANISMS AND DYNAMICS OF MACHINERY Fourth Edition The emphasis of the text is integrating the computational power of MATLAB into the analysis and design of mechanisms This new book in Brooks Cole's Bookware Companion Series is the first to apply the use of MATLAB to the study of kinematics and dynamics of mechanisms This book is intended as a useful guide for readers interested in understanding kinematics or as a reference for practicing mechanical engineers It provides detailed instruction and examples showing how to use MATLAB increasingly the software program of choice among engineers for complex computations and its accompanying simulation environment SIMULINK to develop powerful and accurate computer simulations of constrained mechanical systems
