Ran,Victor Vinnikov,2019-04-08 This volume is devoted to Joseph A Joe Ball s contributions to operator theory and its applications and in celebration of his seventieth birthday Joe Ball s career spans over four and a half decades starting with his work on model theory and related topics for non contractions and operators on multiply connected domains Later on more applied operator theory themes appeared in his work involving factorization and interpolation for operator valued functions with extensive applications in system and control theory He has worked on nonlinear control time varying systems and more recently on multidimensional

systems and noncommutative  $H$  theory on the unit ball and polydisk and more general domains and these are only the main themes in his vast oeuvre Fourteen research papers constitute the core of this volume written by mathematicians who have collaborated with Joe or have been influenced by his vast mathematical work A curriculum vitae a publications list and a list of Joe Ball's PhD students are included in this volume as well as personal reminiscences by colleagues and friends

Operator Extensions, Interpolation of Functions and Related Topics A. Gheondea, D. Timotin, F.H. Vasilescu, 2012-12-06 Since 1976 the Institute of Mathematics of the Romanian Academy formerly the Department of Mathematics of INCREST and the Faculty of Mathematics formerly the Faculty of Sciences of the University of Timi oara have organized several Con ferences on Operator Theory These Conferences were held yearly in Timi oara or in Timi oara and Herculane and beginning with 1985 they were held in Bucharest 1985 1986 in Timi oara 1988 and in Predeal 1990 At the beginning these Conferences answered the need of a part of the Romanian Mathematical Community of exploring other forms of survival after the dissolution of the Institute of Mathematics in 1975 Soon these meetings evolved to International Conferences with a broad participation and where important results in Operator Theory and Operator Algebras and their interplay with Complex Function Theory Differential Equations Mathematical Physics System Theory etc were presented The 14th Conference on Operator Theory was held between June 1st and June 5th 1992 at the University of Timi oara It was partially supported by the Institute of Mathematics of the Romanian Academy and by the Faculty of Mathematics of the University of Timi oara Another important contribution towards covering the costs of this meeting came from The Soros Foundation for an Open Society Without this generous help the organizing of this event would be impossible Since 1980 the Proceedings of OT Conferences were published by Birkhauser Verlag in the series Operator Theory Advances and Applications The abstracts of the talks were collected in the Conference Report published by the University of Timi oara

Series in Banach Spaces Vladimir Kadets, 2012-12-06 Series of scalars vectors or functions are among the fundamental objects of mathematical analysis When the arrangement of the terms is fixed investigating a series amounts to investigating the sequence of its partial sums In this case the theory of series is a part of the theory of sequences which deals with their convergence asymptotic behavior etc The specific character of the theory of series manifests itself when one considers rearrangements permutations of the terms of a series which brings combinatorial considerations into the problems studied The phenomenon that a numerical series can change its sum when the order of its terms is changed is one of the most impressive facts encountered in a university analysis course The present book is devoted precisely to this aspect of the theory of series whose terms are elements of Banach as well as other topological linear spaces The exposition focuses on two

complementary problems The first is to characterize those series in a given space that remain convergent and have the same sum for any rearrangement of their terms such series are usually called unconditionally convergent The second problem is when a series converges only for certain rearrangements of its terms in other words converges conditionally to describe its sum range i e the set of sums of all its convergent rearrangements      **Mathematical Reviews** ,1995      **Recursive Algorithms for Digital Communications Using the Discrete Wavelet Transform** Ilan Sharfer,1996      **Topics in Interpolation Theory** Harry Dym,1997      *Classes of Linear Operators* Israel Gohberg,Seymour Goldberg,M.
