Proceedings, IEEE Control Systems Society ... Symposium on Computer-Aided Control System Design (CACSD). ,2004 Trends in Control and Decision-Making for Human-Robot Collaboration Systems Yue Wang,Fumin

Zhang,2017-01-24 This book provides an overview of recent research developments in the automation and control of robotic systems that collaborate with humans A measure of human collaboration being necessary for the optimal operation of any robotic system the contributors exploit a broad selection of such systems to demonstrate the importance of the subject particularly where the environment is prone to uncertainty or complexity They show how such human strengths as high level decision making flexibility and dexterity can be combined with robotic precision and ability to perform task repetitively or in a dangerous environment The book focuses on quantitative methods and control design for guaranteed robot performance and balanced human experience from both physical human robot interaction and social human robot interaction Its contributions develop and expand upon material presented at various international conferences They are organized into three parts covering one human one robot collaboration one human multiple robot collaboration and human swarm collaboration Individual topic areas include resource optimization human and robotic safety in collaboration human trust in robot and decision making when collaborating with robots abstraction of swarm systems to make them suitable for human control modeling and control of internal force interactions for collaborative manipulation and the sharing of control between human and automated systems etc Control and decision making algorithms feature prominently in the text importantly within the context of human factors and the constraints they impose Applications such as assistive technology driverless vehicles cooperative mobile robots manufacturing robots and swarm robots are considered Illustrative figures and tables are provided throughout the book Researchers and students working in controls and the interaction of humans and robots will learn new methods for human robot collaboration from this book and will find the cutting edge of the subject described in depth

Robust Filtering and Fault Detection for T-S Fuzzy Systems Xiao-Lei Wang,Guang-Hong Yang,Yu-Long Wang,2025-05-31 This book conducts an in depth research on robust filtering and fault detection for a class of T S fuzzy systems On the basis of the existing research on T S fuzzy theory robust filtering theory and fault diagnosis theory some new and effective technologies are proposed to solve the problems of robust filtering and fault detection for a class T S fuzzy systems while overcoming the shortcomings and limitations of the existing solutions This book introduces new design solutions for a class of T S fuzzy systems to address the existing problems in the research of robust filtering and fault detection namely 1 two new filtering methods are explored to obtain better filtering results than the existing approaches 2 a new event triggered filtering scheme is proposed for T S fuzzy systems with bounded disturbances which realizes that the

designed observer gains in the absence of event triggered mechanisms are also applicable to the case with event triggered mechanisms 3 two new methods are constructed to deal with the asynchronous problems of premise variables effectively which overcome the defects and limitations of the existing ones and 4 an effective fault detection scheme for handling measurement outliers is constructed which can avoid the occurrence of false alarms This book is intended to inspire researchers and engineers offering deeper insights into robust filtering and fault detection for T S fuzzy systems and equipping them with the latest advancements in fuzzy system theory robust filtering and fault diagnosis It also provides valuable theoretical references for engineers tackling practical engineering problems
