A Statistical Model Stephen E. Fienberg, David C. Hoaglin, William H. Kruskal, Judith M. Tanur, 2012-12-06 A large number of Mosteller's friends, colleagues, collaborators and former students have contributed to the preparation of this volume in honor of his 70th birthday. It provides a critical assessment of Mosteller's professional and research contributions to the field of statistics and its applications.

Contributions to Statistics Jureckova, 2014-08-23 The death of Jaroslav Hajek on June 10, 1974 was a heavy loss to many mathematicians all around the world. The impact of his work on mathematical statistics has been so extraordinary that it has completely changed the character of some fields of this science. Some of his ideas have become a part of the common statistical consciousness. Hajek's contribution to statistics includes research in the theory of rank tests, parametric estimation, probability sampling, statistical inference in stochastic processes and various other specializations. His results were always of fundamental character for the corresponding field and they continue to stimulate further research and progress. For proving the results he developed original methods which are now commonly used for the solution of many related problems. Hajek was an enthusiastic mathematician; the secret of his success was in his love for the subject and in his great sense for practical applications; just practical problems provided him the source of excellent mathematical problems and ideas. We see the best way of commemorating Jaroslav Hajek in the arrangement of the present volume which collects papers of authors whose work is related to Hajek's work and who were friends of him. The authors come from Czechoslovakia, Hungary, the Netherlands, Sweden, U.S.A., U.S.S.R. and West Germany. I wish to thank most cordially all the authors and all who contributed in any way to the success of the publication.

Contributions to Statistics P. C. Mahalanobis, 2014-05-12. Contributions to Statistics focuses on the processes, methodologies and approaches involved in statistics. The book is presented to Professor P. C. Mahalanobis on the occasion of his 70th birthday. The selection first offers information on the recovery of ancillary information and combinatorial properties of partially balanced designs and association schemes. Discussions focus on combinatorial applications of the algebra of association matrices, sample size analogy, association matrices and the algebra of association schemes and conceptual statistical experiments. The book then examines lattice sampling by means of Lahiri's sampling scheme, contributions of interpenetrating networks of samples and apparently

unconnected problems encountered in sampling work The publication takes a look at screening processes place of the design of experiments in the logic of scientific inference and rarefaction Topics include mathematical probability scientific experience combinatorial progress gains and losses criterion and scores simple drug screening process and screening of crop varieties The manuscript then reviews the estimation and interpretation of gross differences and the simple response variance partially balanced asymmetrical factorial designs and approximation of distributions of sums of independent summands by infinitely divisible distributions The selection is a dependable reference for statisticians and researchers interested in the processes methodologies and approaches employed in statistics **Contributions to Statistics** William Gemmell Cochran,1982 F.
