

AD Architectural Design

An abstract composition of architectural models arranged in a circular pattern on a dark, textured background. On the left, a series of pinkish-red circular platforms are stacked, each holding a white, cross-shaped object. On the right, a series of translucent, yellowish-gold, bulbous forms are arranged in a curve. At the bottom, a series of translucent, ribbed, star-shaped or cross-shaped forms are arranged in a curve. The overall effect is a sense of dynamic movement and architectural exploration.

## **Contemporary Processes In Architecture:**

**Contemporary Processes in Architecture** Ali Rahim, 2000-11 Yesterday's working methods are no longer adequate for architectural practice. The neo avant garde architects are now arguing for contemporary processes that are as dynamic and fluid as the way we live and think with the same intensity as such intangible forces as the global market and the Internet. For any process to be truly creative in the generative sense we must condition an environment where new rules engage and inspire us. Models of design need to be created that are capable of consistently transforming and evolving, keeping pace with today's rate of change. This issue of *Architectural Design* explores how contemporary processes in the pursuit of creativity and fluidity have become more abstract and experimental, attempting to overcome the pragmatic determinism attributed to more conventional working methods. It explores the work of architects who design with generative potentials, force fields and conceptual diagrams developed with the aid of high end computer software packages. Through elucidating texts and the potent imagery of process, many of the projects are illustrated stage by stage; it effectively promises that a revolution is about to happen in the production of architectural design. Ben van Berkel of UN Studio, James Corner, Ed Keller, Kolatan MacDonald Studio, Nox, Oliver Lang, Greg Lynn, Enrique Norton, OCEAN, Reiser Umemoto. *Contemporary Architecture and the Digital Design Process* Peter Szalapaj, 2014-04-23 *Contemporary Architecture and the Digital Design Process* introduces the reader to new developments in the computer modelling of design form in contemporary architectural practice through a series of detailed case studies. The book illustrates how evolving design practices use and exploit the potential of new computing technologies in a wide range of areas and applications. A central thesis of this book is that technology follows design demand rather than design adjusting to available new technology. Designers are not merely passive recipients of prescribed computing tools and techniques. Instead, they are increasingly able to express their intuitive design ideas through the rational medium of computing. The book features several contemporary building projects, each of which introduces a range of CAD and computing issues based upon the work of creative architectural and engineering design practices. These include the offices of Frank O Gehry, Peter Cook and Colin Fournier, Anthony Hunt Associates, Peter Hubner, Szyskowitz, Kowalski and Faulkner Brown. All these examples show what architects need to know and the skills they need to acquire to use advanced CAD technology.

**Contemporary Techniques in Architecture** Ali Rahim, 2002-04-17 This publication addresses the most far reaching and innovative developments in digital practice to have taken place in the last five years. It demonstrates how experimental architects are being challenged at a new rigorous intellectual level and are going beyond the strictures of the conceptual into the realm of the material. As digital techniques are starting to be successfully assimilated and translated into design methodology, they are also for the first time being seen through to architectural realisation. This is illustrated here at the scale of space, material, programme and construction. The title includes the work of high profile philosophers, architects and engineers such as Manuel Delanda who wrote *1000 Years of Non Linear History*, Greg Lynn, Foreign Office Architects and

Cecil Balmond of Ove Arup who has worked with Daniel Libeskind on his proposal for the Spiral Building London as well as with Philip Johnson and Studio Baad on the Chavasse Park Project featured here

**Constructing Identity in Contemporary Architecture** Peter Herrle,Stephanus Schmitz,2009

The global spread of uniform modes of production and cultural values has been accompanied by a dissemination of stereotypes of modern architecture styles almost everywhere around the globe Paradoxically the reverse process has also emerged In some countries the elites feel the necessity to counterbalance the loss of identity and defend their own cultures against the intruding forces of globalization What started as a defensive notion has developed into a more progressive attempt to re create what has allegedly been lost This trend is being strongly expressed in discourses about architecture in countries of the South Who are the actors feeling compelled to construct new identities How are these new identities in architecture created in various parts of the world And which are the ingredients borrowed from various historical and ethnic traditions and other sources These and other questions are discussed in five case studies from different parts of the world written by renowned scholars from Brazil Mexico Egypt India and Singapore

*Contemporary Perspectives on Architectural Organicism* Gary Huafan He,Skender Luarasi,2023-06-07

This project is born out of similar questions and discussions on the topic of organicism emergent from two critical strands regarding the discourse of organic self generation one dealing with the problem of stopping in the design processes in history and the other with the organic legacy of style in the nineteenth century as a preeminent form of aesthetic ideology The epistemologies of self generation outlined by enlightenment and critical philosophy provided the model for the discursive formations of modern urban planning and architecture The form of the organism was thought to calibrate modernism s infinite extension The architectural organicism of today does not take on the language of the biological sciences as they did in the nineteenth and twentieth centuries but rather the image of complex systems be they computational informational geo ecological or even ontological aesthetic networks What is retained from the modernity of yesterday is the ideology of endless self generation Revisiting such a topic feels relevant now in a time when the idea of endless generation is rendered more suspect than ever amid an ever increasing speed and complexity of artificial intelligence AI networks The essays collected in this book offer a variety of critiques of the modernist idea of endless growth in the fields of architecture literature philosophy and the history of science They range in scope from theoretical and speculative to analytic and critical and from studies of the history of modernity to reflections of our contemporary world Far from advocating a return to the romantic forms of nineteenth century naturphilosophie this project focuses on probing organicism for new forms of critique and emergent subjectivities in a contemporary post pandemic constellation of neo naturalism in design climate change complex systems and information networks This book will be of interest to a broad range

of researchers and professionals in architecture and art history historians of science visual artists and scholars in the humanities more generally

*Contemporary Japanese Architecture* James Steele, 2017-03-16

Contemporary Japanese Architecture presents a clear and comprehensive overview of the historical and cultural framework that informs the work of all Japanese architects as an introduction to an in depth investigation of the challenges now occupying the contemporary designers who will be the leaders of the next generation It separates out the young generation of Japanese architects from the crowded distinguished multi generational field they seek to join and investigates the topics that absorb them and the critical issues they face within the new economic reality of Japan and a shifting global order Salient points in the text are illustrated by beautiful descriptive images provided by the architects and from the extensive collection of the author By combining illustrations with timelines and graphics to explain complex ideas the book is accessible to any student seeking to understand contemporary Japanese architecture

Elegance Ali Rahim, Hina Jamelle, 2007-03-12

Elegance represents an important watershed in architectural design Since the onset of computer driven technologies innovative designers have almost exclusively been preoccupied with the pursuit of digital techniques This issue of AD extrapolates current design tendencies and brings them together to present a new type of architecture one that is seamlessly trying processes space structure and material together with beauty Elegance here is cast with a new contemporary meaning as it is applied to work that is effortlessly complex It is analogous to an elegant algorithm that uses a small amount of initiative code to great effect In a structure elegance may be expressed by a complex surface that retains its continuity and integrity even when punctured In many ways Elegance marks a coming of age for digital architecture as architects become more adept at producing complexity and integrating digital design technologies production and assembly systems producing elegant solutions It is the potent finesse that is often associated with the work of Zaha Hadid Architects and other featured architects such as Mark Goulthorpe of Decoi and Hani Rashid of Asymptote
