**Content-Based Video Retrieval** Milan Petkovic, Willem Jonker, 2013-06-29 The area of content based video retrieval is a very hot area both for research and for commercial applications In order to design effective video databases for applications such as digital libraries video production and a variety of Internet applications there is a great need to develop effective techniques for content based video retrieval One of the main issues in this area of research is how to bridge the semantic gap between low level features extracted from a video such as color texture shape motion and others and semantics that describe video concept on a higher level In this book Dr Milan Petković and Prof Dr Willem Jonker have addressed this issue by developing and describing several innovative techniques to bridge the semantic gap The main contribution of their research which is the core of the book is the development of three techniques for bridging the semantic gap 1 a technique that uses the spatio temporal extension of the Cobra framework 2 a technique based on hidden Markov models and 3 a technique based on Bayesian belief networks To evaluate performance of these techniques the authors have conducted a number of experiments using real video data The book also discusses domain solutions versus general solution of the problem Petković and Jonker proposed a solution that allows a system to be applied in multiple domains with minimal adjustments They also designed and described a prototype video database management system which is based on techniques they proposed in the book

The VC-1 and H.264 Video Compression Standards for Broadband Video Services Jae-Beom Lee, Hari Kalva, 2008-12-18 Probably the most interesting and influential class to the authors about video compression was EE E6830 Digital Image Processing and Understanding at Columbia University in 1995 offered by adjunct Professors Dr

Netravali Dr Haskell and Dr Puri at AT T In the class they impressed the authors with how such difficult and mysterious statements in video standards could be interpreted understood in plain human languages Since then the authors had had a dream that similar services could also be provided to interpret difficult video subjects into reasonable level of explanations in the future The VC 1 standard is fundamentally the same as WMV 9 WMV x video compression technologies of Microsoft have long been the most popular over the Internet due to popularity of Microsoft Operating Systems The technologies were published in August 2005 for the first time in a formal SMPTE document in the name of VC 1 and the official standard then was finalized in April 2006 In contrast the MPEG committee recently standardized the MPEG AVC H 264 video coding standard whose first version was officially published in May 2003 and several subsequent amendments and corrigenda then followed until recently These two are highly efficient compression standards that can make hi quality video services possible for Digital Storage Media e g Blu ray DVD or HD DVD and or broadband networks applications e g IPTV
