Continental Scientific Drilling Program:

Continental Scientific Drilling Program U.S. Geodynamics Committee, 1979 The Workshop on Continental Drilling for Scientific Purposes addressed the questions of how to maximize the scientific value of current and planned continental drilling efforts of Federal agencies and industry and how to supplement these efforts with holes drilled solely for scientific purposes The subjects treated by Workshop panels included basement structures and deep continental basins broad and specific questions related to understanding the earth's continental crust thermal regimes basic understanding of geothermal systems mineral resources basic understanding of ore forming processes earthquakes basic understanding of earthquakes and faulting mechanisms drilling technology development of drilling and logging equipment capable of operating at high temperatures up to 500 C *The United States Continental Scientific Drilling Program*, 1992 Continental Scientific Drilling Ulrich Harms, Christian Koeberl, Mark D. Zoback, 2007-04-16 Scientific drilling is an indispensable tool of modern Earth science search as it provides the only means of obtaining direct information on processes operating at depth Drilling allows for the determination of situ properties of solid materials and fluids and permits testing of hypotheses and models derived from surface observations In addition drill holes may be used as a natural laboratory for experiments and as observatories for long term monitoring of on going active processes Earth drilling therefore plays a critical role in scientific research directed towards proved understanding of the workings of our planet and has a key role in solving urgent socioeconomic problems As a rule drilling projects are an integral component of major geoscientific research programs comprising comprehensive pre site investigations accompanying laboratory studies the drilling phase itself and consecutive measurements and tests in the drill hole Such drilling programs are costly and thus only realizable to a limited extent International cost sharing the optimal utilization of all available resources the incorporation of international leading experts and the application of the existing know how as well as the selection of an optimal drilling location World Geological Site are thus essential elements of an international scientific drilling program **Prospectus for the International Continental Scientific Drilling Program** International Continental Scientific Drilling Program, 1996 Continental Scientific Drilling Program E.F. Workshop to Develop Deep-life Continental Scientific Drilling Projects, 2015 The International Continental Scientific Drilling Program ICDP has long espoused studies of deep subsurface life and has targeted fundamental questions regarding subsurface life including the following 1 What is the extent and diversity of deep microbial life and what are the factors limiting it 2 What are the types of metabolism carbon energy sources and the rates of subsurface activity 3 How is deep microbial life adapted to subsurface conditions 4 How do subsurface microbial communities affect energy resources And 5 how does the deep biosphere interact with the geosphere and atmosphere Horsfield et al 2014 Many ICDP sponsored drilling projects have included a deep life component however to date not one project has been driven by deep life goals in part because geomicrobiologists have been slow to initiate deep biosphere driven ICDP projects Therefore the Deep Carbon Observatory DCO recently partnered with the ICDP to sponsor a workshop with the specific aim of gathering potential proponents for deep life driven ICDP projects and ideas for candidate drilling sites Twenty two participants from nine countries proposed projects and sites that included compressional and extensional tectonic environments evaporites hydrocarbon rich shales flood basalts Precambrian shield rocks subglacial and subpermafrost environments active volcano tectonic systems megafan deltas and serpentinizing ultramafic environments The criteria and requirements for successful ICDP applications were presented Deep life specific technical requirements were discussed and it was concluded that while these procedures require adequate planning they are entirely compatible with the sampling needs of other disciplines As a result of this workshop one drilling workshop proposal on the Basin and Range Physiographic Province BRPP has been submitted to the ICDP and several other drilling project proponents plan to submit proposals for ICDP sponsored drilling workshops in 2016

Continental Scientific Drilling Project of the Cretaceous Songliao Basin (SK-1) in China Chengshan Wang, 2018-11-28 Continental Scientific Drilling Project of the Cretaceous Songliao Basin SK 1 in China is the first reference to provide the results of the first part of scientific drilling project at the Songliao Basin in the Daqing oil field the largest known oil field in China The project has two major objectives one is to correlate the oceanic and continental records and determine the principal drivers of climate change in order to assist in future climate change predictions and its influence on the earth's environment The second is to further test the theory of terrestrial genesis of hydrocarbons and to explore the formation of intra continental sedimentary basins as many are major hydrocarbon provinces In addition this project provides the scientific basis for exploration of the Daqing Oilfields which have a yearly production of forty million tons of oil The world is entering a new exciting era to explore in which scientific drilling will provide a quantum leap in our understanding of its deep earth and history Continental Scientific Drilling Project of the Cretaceous Songliao Basin SK 1 in

China will play an important role in promoting scientific drilling and earth system science research Summarizes the geological background seismic profile and tectonic evolution of the Songliao Basin Provides detailed information on drilling technology of SK 1 which successfully obtained 2500m core with a recovery rate of 95% Includes detailed core information stratigraphic charts core photographs and core photograph identification tables *Continental Scientific Drilling Committee*, 1981 This program which provides support for geoscience research including advanced technology and data information services concerning drilling in the continental crust of the United States for scientific purposes is described The curatorial needs and comparative site assessment projects are discussed MHR **Continental Scientific Drilling Program**, 1979
