A move towards further drag reduction came with Wally Wallick's "Winner" from the West Coast of the U.S.A. where the wing taper was reduced to give better lift distribution over the span and the section was made bi-convex though even thicker. The McCoy engine was enclosed in a cowl with venturi airflow to aid cooling, and the dolly given greater wheel spread over that of the Jughead.

Fig. 119. Single blade prop on this Speedwagon at left for the .29 size engine. Note attention to streamlining. Made 135 m.p.h. in 1940.

Tex Russell went further and eliminated the tailplane on his "Vampire" swept forward wing for the Hornet (Fig. 116), but retained a fixed undercarriage and restricted the top speed to a best ever 94 m.p.h., at a time when Harold deBolt and his first "Speedwagon" (Fig. 117) were flying as fast as 120 m.p.h. to hold the U.S. record. Harold gave us more ideas for speed model design, and most unique was his clockwise rotation in the circuit. While ideal for left handed people, it was not (as Jim Walker actually stated in his 1940 patent) as comfortable to fly right handed, with the pilot constantly backing up. When deBolt "Speedwagon" kits (Fig. 118) appeared with their curved fuselages for built-in circular flight and 2° engine inset into the circle, Harold had to offer "opposite hand" fuselages for those who preferred to fly anti-clockwise. Moreover, when the ugly subject of whipping became more serious and a central pylon was introduced to replace the previous 5 ft. diameter pilot's operating circle, right handers found clockwise flight even more difficult. Beside the curved fuselage and inset engine, Harold also gave us the shallow butterfly tail, eliminating the fin; and elliptical surfaces. The tail contributes greatly to maintaining lateral stability in a circular flight path, and the lift/drag distribution of the ellipse is now accepted as the best approach to speed design (Figs. 119, 120, 121).

Further significant developments were to come with Don Newberger's "White Comet" design which made 116 m.p.h. with a McCoy 49 in 1947. Don had reduced the overall size of the speed model more to that known today, and at the same time, introduced the "toothpick" airscrew. Using a 9" x 13½" prop on the McCoy 49,
