Rational Decisions in Organisations Frédéric Adam, Dorota Kuchta, Stanisław Stanek, 2022-05-30 Managers in organisations must make rational decisions Rational decision making is the opposite of intuitive decision making It is a strict procedure utilising objective knowledge and logic It involves identifying the problem to solve gathering facts identifying options and outcomes analysing them considering all the relationships and selecting the decision Rational decision making requires support methods and software tools The identification of the problem to solve needs methods that would measure and evaluate the current situation Identification and evaluation of options and analysis of the available possibilities involves analysis and optimisation methods Incorporating intuition into rational decision making needs adequate methods that would translate ideas or observed behaviours into hard data Communication observation and opinions recording is hardly possible today without adequate software Information and data that form the input intermediate variables and the output must be stored managed and made accessible in a user friendly manner Rational Decisions in Organisations Theoretical and Practical Aspects presents selected recent developments in the support of the widely understood rational decision making in organisations illustrated through case studies The book shows not only the variety of perspectives involved in decision making but also the variety of domains where rational decision support systems are needed The case studies present decision making by medical doctors students and managers of various universities IT project teams construction companies banks and small and large manufacturing companies Covering the richness of relationships in which the decisions should and must be taken the book illustrates how modern organisations operate in chains and networks they have multiple responsibilities including social legal business and ethical duties Nowadays managers in organisations can make transparent decisions and consider a multitude of stakeholders and their diverse features incorporating diverse criteria using multiple types and drivers of information and decision making patterns and referring to numerous lessons learned As the book makes clear the marriage of theoretical ideas with the possibilities offered by technology can make the decisions in organisations more rational and at the same time more human

Against Utopia - Technology won't save us Victor de la Fuente, 2022-01-10 Against Utopia Technology Will Not Save Us is a book that unsettles because it dismantles an illusion We live surrounded by discourses that promise a perfect future built on algorithms metaverses and machines that make decisions for us The dominant narrative speaks of self driving cars that will end accidents of artificial intelligences that will solve what humans cannot of cryptocurrencies that will free the economy of genetic advances that will perfect life and of a Singularity that will take us beyond our own intelligence But behind that vision lies a false promise the idea that technology on its own will be enough to save us The author a technophilosopher invites us to question this mirage The transformative power of each innovation is acknowledged but all of them carry the imprint of those who create them biases ethical dilemmas hidden interests and unforeseen consequences The metaverse with its promise of parallel worlds where anything is possible may end

up eroding the way we relate to each other Autonomous vehicles heralded as the dawn of a new era in mobility raise unsettling questions about work decision making power and dependence on systems we barely understand Artificial intelligence far from being neutral reflects and amplifies our limitations and although cryptocurrencies and NFTs are presented as symbols of freedom and disruption their environmental impact volatility and speculative use reveal a darker side Even biogenetics capable of altering the most intimate aspects of life forces us to confront questions that verge on the sacred What does it mean to intervene in the code of the human Where do we draw the line And on the horizon looms the Singularity that promise of a definitive leap into the posthuman which inspires not so much hope as vertigo This book does not seek to deny the importance of innovation or to paint a bleak future for the mere sake of criticism Its aim is a critical exercise to look at technology without the veil of utopia to accept its power and at the same time its risks and limitations Because the real decision does not lie in the machines but in the way we choose to coexist with them Against Utopia is ultimately an invitation to think calmly in a time that seems to be moving far too fast A call not to confuse promises with certainties and to remember that the future is not designed solely with code but with responsibility reflection and human consciousness
