Detection and Spectrometry of Faint Light J. Meaburn, 2012-12-06 The aim of this book is to bridge the gap between the pure instrumental physicist and the user of detectors and spectrometers The essential parameters describing the performance of these devices are identified and the designs of a wide variety of practical instruments are illustrated working on topical problems The author has spent 14 years designing and applying spectrometers in the visible and near infra red domains predominantly to investigate gaseous nebulae Most recently he has designed for instance a large 15 x IS in Ha interference filter for the SRC 48 in Schmidt camera insect eye Fabry Perot spectrographs image tube filter cameras a SISAM monochromator a three beam Fabry Perot monochromator collaboratively for the ISO in Anglo Australian telescope and a two etalon PEPSIOS type monochromator Consequently emphasis in this book is placed on devices useful from the ultra violet to the infra red Likewise many of the illustrations are drawn from astronomy However most of the ideas that are presented invariably have applications in other branches of science and wavelength domains

Atomic, Molecular, and Optical Physics: Atoms and Molecules, 1996-05-16 Combined with the other two volumes this text is a comprehensive treatment of the key experimental methods of atomic molecular and optical physics as well as an excellent experimental handbook for the field Thewide availability of tunable lasers in the past several years has revolutionized the field and lead to the introduction of many new experimental methods that are covered in these volumes Traditional methods are also included to ensure that the volumes will be a complete reference source for the field
