**Commingled Human Remains** Bradley Adams, John Byrd, 2014-06-04 Commingled human remains are encountered in situations ranging from prehistoric ossuaries to recent mass fatality incidents Commingled Human Remains Methods in Recovery Analysis and Identification brings together tools from diverse sources within the forensic science community to offer a set of comprehensive approaches to resolving issues associated with commingled remains This edition focuses on forensic situations although some examples from prehistoric contexts are also addressed Commingling of bones and other body parts is a major obstacle to individual identification that must be addressed before other forensic determinations or research can proceed Regardless of the cause for the commingling transportation disaster terrorist attack natural disaster genocide etc it is critical that the proper experts are involved and that the proper techniques are employed to achieve the greatest success in making identifications Resolution of commingling nearly always requires consideration of multiple lines of evidence that cross the disciplinary lines of modern forensic science The use of archaeology DNA and forensic anthropology are several areas that are critical in this process and these are core topics presented in this book Even a relatively simple mass fatality event can become very complicated once body fragmentation and commingling occur Expectations associated with all phases of the process from

recovery of remains to their final identification and release to next of kin must be managed appropriately A powerful resource for those working in the forensic sciences who need to plan for and or address the complex challenges associated with commingled and fragmentary human remains Written by an international group of the foremost forensic scientists presenting their research and candid experiences of dealing with commingled human remains offering recommendations and providing lessons learned which can be invaluable to others who find themselves facing similar challenges Contains chapters on remains recovery laboratory analysis case studies and broader topics such as mass fatality management and ethical considerations

A. Schultz, 2022-01-30 Detection canines have been utilized throughout the world for over a century and while numerous attempts have been made to replicate the canine's ability to detect substances by mechanical means none has been as successful. The olfactory system is a highly intricate and sophisticated design for chemical sensing and the olfactory capacity of many animals including canines is considered unmatched by machine due to not only their great sensitivity and superior selectivity but also their trainability and mobility. These unique features have led to the use of such animals as whole animal biosensors. Amplifying the benefits and diminishing the limitations of detection canines interdisciplinary research is crucial to understanding canine olfaction and detection and enhancing this powerful and complex detector. The past 50 years have produced vast advancements in animal behavior training technology to develop canines into more proficient and reliable sensors while scientific research has provided tremendous support to help practitioners better understand how to utilize this powerful sensor. This book assembles a diverse group of authors with expertise in a variety of fields relating to detection canines and the chemical sensing industry including both research and operational perspectives on detection canines. It illustrates how science enhances our understanding of how canines are employed for solving some of the world's leading detection challenges.

**Human Remains Detection** Ritchie Callaghan, 1999 Human Remains detection. Cadaver dogs are being utilised throughout the United States and Great Britain as aids to forensic investigations. Their skills in identifying remains sites can save a great deal of manpower and cost and decrease response times in important investigations. The present study involved training Queensland Police Dog Geordie to recognise decaying human scent using a pseudo corpse, chemical cadaver clothing and finally real human remains. The success of the training was evaluated by testing the ability of the dog to detect training chemicals and then real human remains.
