The Oxford Handbook of the Prehistoric Arctic T. Max Friesen, Owen K. Mason, 2016-08-05 The North American Arctic was one of the last regions on Earth to be settled by humans due to its extreme climate limited range of resources and remoteness from populated areas Despite these factors it holds a complex and lengthy history relating to Inuit Iupiat Inuvialuit Yupik and Aleut peoples and their ancestors The artifacts dwellings and food remains of these ancient peoples are remarkably well preserved due to cold temperatures and permafrost allowing archaeologists to reconstruct their lifeways with great accuracy Furthermore the combination of modern Elders traditional knowledge with the region s high resolution ethnographic record allows past peoples lives to be reconstructed to a level simply not possible elsewhere Combined these factors yield an archaeological record of global significance the Arctic provides ideal case studies relating to issues as diverse as the impacts of climate change on human societies the complex process of interaction between indigenous peoples and Europeans and the dynamic relationships between environment economy social organization and ideology in hunter gatherer societies In the The Oxford Handbook of the Prehistoric Arctic each arctic cultural tradition is described in detail with up to date coverage of recent interpretations of all aspects of their lifeways Additional chapters cover broad themes applicable to the full range of arctic cultures such as trade stone tool technology ancient DNA research and the relationship between archaeology and modern arctic communities The resulting volume written by the region s leading researchers contains by far the most comprehensive coverage of arctic archaeology ever assembled

The Far Northeast Kenneth R. Holyoke, M. Gabriel Hrynck, 2022-03-22 The Far Northeast 3000 BP to Contact is the first volume to synthesize archaeological research from across Atlantic Canada and northern New England for the period spanning from 3000 years ago to European contact Recently notions of the Woodland period in the broader Northeast have drawn scrutiny from experts due to increasing awareness that its hallmarks such as horticulture village formation mortuary ceremonialism and the advent of various

technologies appear to be less synchronous than once thought By paying particular attention to the Far Northeast and its unique yet sometimes marginal position in Woodland discourse this work offers a much needed in depth look at one of the best documented cases of hunter gatherer persistence and adaptation at the eve of European contact Penned by academic government and cultural resource management archaeologists the seventeen chapters in *The Far Northeast 3000 BP to Contact* draw on decades of research in considering this period both in terms of variability within the region and integration with broader cultural patterns in the Northeast and beyond **From Hard Rock to Heavy Metal** Michelle Rae

Bebber, Christopher B. Wolff, 2025-07-01 The discovery and development of metals as tool media is a topic of global interest This phenomenon is generally associated with sedentary agricultural societies however in North America metal use by hunter gatherer populations began as early as 9 000 years ago and continued into modern times The regional and cultural diversity of research in this volume contributes to how we conceptualize hunter gatherer innovation technological proficiency and complex decision making in the past Readers are challenged to reconsider long held assumptions about how when and under what conditions metal became a part of humanity s story *Archaeometallurgy in Global Perspective* Benjamin W.

Roberts, Christopher P. Thornton, 2014-01-07 The study of ancient metals in their social and cultural contexts has been a topic of considerable interest in archaeology and ancient history for decades partly due to the modern dependence on technology and man made materials The formal study of Archaeometallurgy began in the 1970s 1980s and has seen a recent growth in techniques data and theoretical movements This comprehensive sourcebook on Archaeometallurgy provides an overview of earlier research as well as a review of modern techniques written in an approachable way Covering an extensive range of archaeological time periods and regions this volume will be a valuable resource for those studying archaeology worldwide It provides a clear straightforward look at the available methodologies including Smelting processes Slag analysis Technical Ceramics Archaeology of Mining and Field Survey Ethnoarchaeology Chemical Analysis and Provenance Studies Conservation Studies With chapters focused on most geographic regions of Archaeometallurgical inquiry researchers will find practical applications for metallurgical techniques in any area of their study Ben Roberts is a specialist in the early metallurgy and later prehistoric archaeology of Europe He was the Curator of the European Copper and Bronze Age collections at the British Museum between 2007 and 2012 and is now a Lecturer in Prehistoric Europe in the Department of Archaeology at the Durham University UK Chris Thornton is a specialist in the ancient metallurgy of the Middle East combining anthropological theory with archaeometrical analysis to understand the development and diffusion of metallurgical technologies throughout Eurasia He is currently a Consulting Scholar of the University of Pennsylvania Museum where he received his PhD in 2009 and the Lead Program Officer of research grants at the National Geographic Society *Geoarchaeology* George Robert Rapp, Christopher L. Hauser,2008 In eighteenth century Jamaica an informal underground economy existed among enslaved laborers Mark Hauser uses pottery fragments to examine their trade networks and to understand how enslaved and free Jamaicans created communities that transcended plantation boundaries An Archaeology of Black Markets utilizes both documentary and archaeological evidence to reveal how slaves practiced their own systematic forms of economic production exchange and consumption Hauser compares the findings from a number of previously excavated sites and presents new analyses that reinterpret these collections in the context of island wide trading networks Trading allowed enslaved laborers to cross boundaries of slave life and enter into a black market of economic practices with pots in hand By utilizing secret trails that connected plantations sectarian churches and these street markets the enslaved remained in contact exchanged information news and gossip and ultimately stoked the colony s 1831 rebellion Hauser considers how uprooted peoples from Africa created new networks in Jamaica and interjects into archaeological discussions the importance of informal economic practice among non elite members of society **European Metals in Native Hands** Kathleen L.
