Developing Mathematics 4:

Developing Mathematics Keith A. Bryant, Steven R. Hadfield, 1991 **Developing Mathematical Reasoning** Pamela Weber Harris, 2025-02-13 Math is not rote memorizable Math is not random guessable Math is figure out able Author Pam Harris argues that teaching real math math that is free of distortions will reach more students more effectively and result in deeper understanding and longer retention This book is about teaching undistorted math using the kinds of mental reasoning that mathematicians do Memorization tricks and algorithms meant to make math easier are full of traps that sacrifice long term student growth for short lived gains Students and teachers alike have been led to believe that they've learned more and more math but in reality their brains never get any stronger Using these tricks may make facts easier to memorize in isolation but that very disconnect distorts the reality of math The mountain of trivia piles up until students hit a breaking point Humanity's most powerful system of understanding organizing and making an impact on the world becomes a soul draining exercise in confusion chaos and lost opportunities **Developing Mathematical Reasoning** Avoiding the Trap of Algorithms emphasizes the importance of teaching students increasingly sophisticated mathematical reasoning and understanding underlying concepts rather than relying on a set rule for solving problems This book illuminates a hierarchy of mathematical reasoning to help teachers guide students through various domains of math development from basic counting and adding to more complex proportional and functional reasoning Everyone is capable of understanding and doing real math This book Highlights the important mathematical relationships strategies and models for students to develop Offers personal stories reflection sections and extensive practical exercises for easy implementation Includes real math a lot of it to provide teachers with examples they can put to use in their classrooms immediately This book is a valuable resource for educators looking to reach more students by building a strong foundation of mathematical thinking in their students By addressing common misconceptions about math and providing practical strategies for teaching real math this book shows that everyone can use the mathematical relationships they already know to reason about new relationships In other words everyone can math **Making Number Talks Matter** Cathy Humphreys, Ruth E. Parker, 2015 Making Number Talks Matter is about the myriad decisions facing teachers as they make this fifteen minute daily routine a vibrant and vital part of their mathematics instruction Throughout the book Cathy Humphreys and Ruth Parker offer practical ideas for using Number Talks to help students learn to reason numerically and build a solid foundation for the study of mathematics This book will be an invaluable resource whether you are already using Number Talks or not whether you are an elementary middle school high school or college teacher or even if you are a parent wanting to support your child with mathematics Using insight gained from many years of doing Number Talks with students of all ages Cathy and Ruth address questions to ask during Number Talks teacher moves that turn the thinking over to students the mathematics behind the various strategies and ways to overcome bumps in the road If you've been looking for ways to transform your mathematics classroom

to bring sense making and divergent thinking to the foreground to bring the Standards for Mathematical Practice to life and to bring joy back into your instruction this book is for you

Impact of the Developing Mathematical Ideas Professional Development Program on Grade 4 Students' and Teachers' Understanding of Fractions. REL

2017-256 Madhavi Jayanthi, Russell Gersten, Mary Jo Taylor, Keith Smolkowski, Joseph Dimino, 2017 Contemporary state math standards emphasize that students must demonstrate an understanding of the mathematical ideas underlying the computations that have typically been the core of the elementary school math curriculum. The standards have put an increased emphasis on the study of fractions in upper elementary grades which are the years during which students build a strong foundation in fractions concepts. At the same time the National Mathematics Advisory Panel 2008 cites limited understanding of fractions as the key reason for the high failure rate in algebra courses. Longitudinal data from both the United States and the United Kingdom have demonstrated that knowledge of fractions in the elementary grades plays a powerful role in subsequent success in algebra the gateway to math achievement in high school. Members of the Regional Educational Laboratory REL Southeast Improving Mathematics Instruction Research Alliance saw teachers lack of in depth knowledge of fractions concepts as a major challenge in their teaching these concepts to their students. Alliance members indicated that teachers would benefit from a professional development program that focused on building a deep understanding of the mathematical ideas underlying fractions and of how to apply those ideas in the classroom. This large scale study investigates the effectiveness of such a program to help inform future district and state investments in professional development. Members of the REL Southeast Improving Mathematics Instruction Research Alliance formed a work group and selected Developing Mathematical Ideas DMI as the professional development program that seemed best suited to develop in depth teacher knowledge of fractions and that could be scaled up in a large number of districts simultaneously. Developed by the Education Development Corporation DMI is designed to help teachers think through major mathematical ideas and examine and reflect on how their students develop and understand the ideas. Teachers examine vignettes of classroom teaching and examples of student work from their own classes and from the classes of other participating teachers. Teachers also work on fractions problems designed to promote their own understanding of fractions concepts. The primary goal of the study was to assess the impact of DMI on grade 4 students and teachers understanding of fractions. The study was conducted during the 2014 15 school year using data from 84 schools in eight school districts in three states Florida Georgia and South Carolina. Participants included 4 204 grade 4 students and 264 grade 4 teachers. Nine trained facilitators provided the professional development. The study used a randomized controlled trial randomly assigning schools to either the treatment condition or the control condition. Teachers in schools in the treatment condition received 24 hours of DMI professional development on fractions during fall 2014. They attended eight three hour sessions conducted over four days two three hour sessions per day one day per month. In most cases substitute teachers filled in for teachers during

these days in some cases teachers preferred occasional Saturday sessions and were compensated for the additional workday Teachers in the control condition did not receive DMI professional development but were free to participate in any type of school or district provided professional development in math including fractions About a third of teachers in the control condition indicated that they had participated in some form of professional development in fractions The student outcome measure was the Test for Understanding of Fractions which was administered at the end of the school year to assess students understanding of fractions concepts and their ability to perform computations and word problems The teacher outcome measure was the Mathematical Knowledge for Teaching Fractions Scale Learning Mathematics for Teaching 2008 which was administered to all teachers at the end of the study to assess their understanding of the mathematical ideas involved in teaching fractions and their knowledge of the typical errors and misconceptions that can develop as students learn this material Key findings include 1 DMI did not demonstrate any impact on student proficiency in fractions Students of teachers who participated in DMI performed at almost the same level as students of teachers who did not participate the difference was not statistically significant $p = 0.637$ and 2 The impact of DMI on teachers knowledge of fractions was inconclusive Teachers who participated in DMI performed 0.19 standard deviation better than teachers who did not participate but the difference was not statistically significant $p = 0.051$ Thus DMI had nonsignificant impacts on students proficiency in fractions and their teachers knowledge of fractions The finding of no impact on students math proficiency is common in the research literature on professional development in math The results suggest that professional development that attempts to build teachers knowledge of the mathematical ideas underlying the K-8 curriculum though theoretically compelling does not always lead to improvements in student learning The following are appended 1 Study design and study sample 2 Reliability of measures 3 Online surveys and 4 Data analysis
