Theory of Mind in Relation to Other Cognitive

Abilities, volume II Ann Dowker,Douglas Frye,2025-08-11 This Research Topic is the second volume of the Research Topic Theory of Mind in Relation to Other Cognitive Abilities Please see the first volume here Theory of mind and its development have been subjects of much research over the last 40 years It is generally thought to be very important in cognitive and social development However there is still much debate as to how it should be defined and even as to whether it is a single entity In particular there is controversy as to the extent to which it should be seen as a specific cognitive module or rather as dependent on or mutually developing with other cognitive abilities and characteristics such as language metacognition executive function and cognitive and perceptual styles that emphasize gist versus detail strong versus weak central coherence It is also possible that the theory of mind itself has several different components which may be related to different degrees different cognitive abilities and characteristics Any relationships between the theory of mind and other cognitive characteristics may also vary with age and may differ between typically developing children and those with autism and other atypical conditions Gaining a greater understanding of these issues is important to increasing our understanding of theory of mind itself the nature of cognitive development the similarities and differences between typically and atypically developing children and whether it may be possible to devise interventions to improve theory of mind either directly or by means of improving other abilities The goal of the current Research Topic is to bring together articles on various aspects of the theory of mind and any concurrent and longitudinal relationships to other cognitive abilities and characteristics These articles may involve studies of children adults or both It is expected that they will primarily include empirical research papers but theoretical articles literature reviews and meta analyses are also welcome

Why

Language Matters for Theory of Mind Janet Wilde Astington, Jodie A. Baird, 2005-03-24 Theory of mind is the phrase researchers use to refer to children's understanding of people as mental beings who have beliefs, desires, emotions, and intentions and whose actions and interactions can be interpreted and explained by taking account of these mental states. The gradual development of children's theory of mind, particularly during the early years, is by now well described in the research literature. What is lacking, however, is a decisive explanation of how children acquire this understanding. Recent research has shown strong relations between children's linguistic abilities and their theory of mind. Yet exactly what role these abilities play is controversial and uncertain. The purpose of this book is to provide a forum for the leading scholars in the field to explore thoroughly the role of language in the development of the theory of mind. This volume will appeal to students and researchers in developmental and cognitive psychology.

Social Cognition and Developmental Psychopathology Carla Sharp, Peter Fonagy, Ian Goodyer, 2008-09-04 Social cognition refers to the capacity to think about others' thoughts, intentions, feelings, attitudes, and perspectives. It has been shown that many children with psychiatric disorders have problems in social cognition. In this book, leaders in the fields of developmental psychopathology examine social cognition across a wide range of disorders.
