Detection And Treatment Of Lipid And Lipoprotein Disorders Of Childhood:

Detection and Treatment of Lipid and Lipoprotein Disorders of Childhood Kurt Widhalm, Naito Herbert K, 1985

Detection and Treatment of Lipid and Lipoprotein Disorders of Childhood Herbert K. Naito, 1985 Abstract A reference text for research workers and clinicians involved in the association of lipid metabolism disorders with cardiovascular disease mortality risk contains 16 authoritative technical papers presented at a 1983 international conference on atherosclerosis. These papers cover clinical screening methods, the effects of reducing serum cholesterol levels and problems encountered in the long term treatment of children having lipid and lipoprotein metabolism disorders. Detailed methods are covered for enhancing the reliability of laboratory data and the latest methods for detecting lipid abnormalities are discussed. The current state of knowledge concerning new therapeutic strategies for treating these abnormalities is reviewed. Practical and applied information of use to clinicians in patient care is included. Data tabulations are presented throughout the text and literature citations are appended to each page.

Recent Aspects of Diagnosis and Treatment of Lipoprotein Disorders Herbert K. Naito, Kurt Widhalm, 1988 Abstract This collection of papers is intended to summarize for the clinician recent knowledge from different disciplines in the field of lipids, lipoproteins and atherogenesis. The leading authorities and researchers in the field present the newest information, concepts and ideas that have evolved in the last three years. Topics include plasma lipoproteins in atherosclerosis, serum lipid levels and their relationship to obesity in adolescents, drug therapy in children with familial hypercholesterolemia, dietary treatment of hypercholesterolemia in children and new diagnostic tests for assessing coronary heart disease risk.

Physician's Guide to the Diagnosis, Treatment, and Follow-Up of Inherited Metabolic Diseases Nenad Blau, Marinus Duran, K Michael Gibson, Carlo Dionisi Vici, 2014-07-08 This book combining and updating two previous editions is a unique source of information on the diagnosis, treatment and follow up of metabolic diseases. The clinical and laboratory data characteristic of rare metabolic conditions can be bewildering for both clinicians and laboratory personnel. Reference laboratory data are scattered and clinical descriptions may be obscure. The Physician's Guide documents the features of more than five hundred conditions grouped according to type of disorder, organ system affected (e.g. liver, kidney, etc.) or phenotype (e.g. neurological, hepatic, etc.). Relevant clinical findings are provided and pathological values for diagnostic metabolites highlighted. Guidance on appropriate biochemical genetic testing is provided. Established experimental therapeutic protocols are described with recommendations on follow up and monitoring. The authors are acknowledged experts and the book will be a valuable desk reference for all who deal with inherited metabolic diseases.

Atherosclerosis and Cardiovascular Disease G.C. Descovich, 1990-12-31. The advances in the field of atherosclerosis and cardiovascular disease continue at an increasingly rapid pace and it is an arduous task for those not directly involved to keep up with the latest developments. The papers presented at the 7th Meeting on Atherosclerosis and Cardiovascular Disease held in Bologna as part of the Ninth Centenary of the foundation of the University of Bologna have been collected together here with the aim of providing all the latest information for doctors and research workers concerned with this important branch of medicine. We are pleased to be able to thank all those who joined us in celebrating the oldest university in the world. The scientific contributions of the highest level are valid proof of the tradition of exchanging experiences and of the continual updating of knowledge in the different sectors of lipid metabolism, genetics, physiopathology, pathological anatomy, bio chemical and clinical diagnosis, diet, pharmacological and non pharmacological therapy. The numerous contributions made by authors in the field of epidemiology and the prevention of atherosclerosis were also fundamental since not only research centres but also doctors all over the world are engaged in the battle which was defined by the WHO twenty five years ago as the most important epidemic of the modern age.
