**Ginn The Detroit Prototype of the NBER Urban Simulation Model** Gregory K. Ingram, John F. Kain, J. Royce, H. James Brown, Stephen P. Dresch, 1972     The Detroit Prototype of the NBER Urban Simulation Model Gregory K. Ingram, 1972     **The Detroit Prototype of the N.B.E.R. Urban Simulation Model** Gregory K. Ingram, John F. Kain, J. Royce Ginn, 1972     *The Detroit Prototype of the NBER Urban Simulation Model* Gregory K. Ingram, 1972     **An Introduction to Urban Development Models and Guidelines for Their Use in Urban Transportation Planning** Will Terry Moore, Fredric J. Ridel, Carlos G. Rodriguez, 1975     *Modelling in Urban and Regional Economics* Alex Anas, 2013-06-17 This title provides a comprehensive critical coverage of the progress and development of mathematical modelling within urban and regional economics over four decades     Land Use-Transport Interaction Models Rubén Cordera, Ángel Ibeas, Luigi dell'Olio, Borja Alonso, 2017-11-15 Transport and the spatial location of population and activities have been important themes of study in engineering social sciences and urban and regional planning for many decades However an integrated approach to the modelling of transport and land use has been rarely made and common practice has been to model both phenomena independently This book presents an introduction to the modelling of land use and transport interaction LUTI with a theoretical basis and a presentation of the broad state of the art It also sets out the steps for building an operational LUTI model to provide a concrete application The authors bring extensive experience in this cross disciplinary field primarily for an academic audience and for professionals seeking a thorough introduction     **Modeling in Urban and Regional Economics** Alex Anas, 2001 This title provides a comprehensive critical coverage of the progress and development of mathematical modelling within urban and regional economics over four decades     **Microeconomic Models of Housing Markets** Konrad Stahl, 2012-12-06 The present volume is an outgrowth of several years interactions between U S American and W German economists interested in analyzing the structure and functioning of housing markets and the impacts of government policies on these markets Such an interaction turns out to be fruitful in several respects Unquestionably German economists can learn a lot from the high level of sophistication exhibited in much of the American literature However this is not a one way road of learning and the adoption of concepts for the following reason Most of the analysis presented in that literature hinges on the use of the standard microeconomics textbook tools Now even a casual observation of housing markets in European countries reveals that behavior and conduct in these markets do not follow the assumptions presumed in this mode of analysis which calls into question the uncritical employment of that tool kit This has important consequences for policy analysis and indeed for some principal attitudes towards housing policy and points sharply to the need for developing analytical concepts that take up more of the peculiarities of housing market behavior and conduct While such a development may be particularly warranted in view of European housing markets we maintain this to be the case in view of the American housing market as well     *Urban Economic and Planning Models* Rakesh Mohan, World Bank, 1979

Urban models can be divided into explanatory or policy oriented classifications Explanatory models are usually systematic attempts at explaining urban form operational models on the other hand rely on either social physics or behavior principles Explanatory models focus on the tradeoffs between the cost of the site itself and the costs of travel the analytic problems caused by the unique quality of each location the effects of transport congestion on city form and the consequences of welfare emphasis on equity The social physics form of operational models tries to replicate statistical regularities observed in the activities of people within a city Economic models based on behavioral principles are the easiest to understand because their structure is drawn from behavioral relations derived from behavioral analysis The characteristics of operational and explanatory models overlap Two operational and two explanatory models are presented as exemplary techniques for modeling urban areas in developing countries Useful explanatory models are likely to require large sets of disaggregated data in order to provide the building blocks for the operational models

Housing and Neighborhood Dynamics John F. Kain, William C. Apgar, 1985 This book assesses the effects of spatially concentrated programs for housing and neighborhood improvement These programs provide direct assistance to low income property owners in an attempt to arrest neighborhood decline and encourage revitalization The authors used the Harvard Urban Development Simulation Model HUDS in evaluating these programs HUDS a large scale computer model represents the process of housing rehabilitation the production and consumption of housing services household moving decisions and other determinant of neighborhood change The model simulates the behavior of approximately 80 000 individual households in two hundred residential neighborhoods of various quality levels Unlike more aggregate models of urban development HUDS has the capacity to identify how specific housing policies affect individual households as well as particular neighborhoods Since program evaluations are no better than the models on which they are based the authors provide sufficient detail to permit those readers primarily interested in the policy analysis to assess the methodology and to understand how the policies are represented in the model a more technical discussion of the model is then presented in appendixes Although the simulations focus on policies that induce central city property owners to upgrade their properties and thus stimulate revitalization many of the authors findings are relevant to larger issues of urban development For example the analysis of how housing rehabilitation subsidies affect the investment behavior of nonsubsidized property owners provides insights about the link between initial upgrading and sustained neighborhood improvement The analysis also demonstrates how differences in location household and housing stock characteristics affect a particular neighborhood s responsiveness to a common policy initiative
