**Children Learn Mathematics** , 2008-01-01 Improving the quality of education is an important endeavor of educational policy and TAL aims to contribute to this TAL is a project initiated by the Dutch Ministry of Education Culture and Sciences and carried out by the Freudenthal Institute FI of Utrecht University and the Dutch National Institute for Curriculum Development SLO in collaboration with the Rotterdam Center for Educational Services CED The quality of education can be improved in many ways TAL proposes to do this by providing insights into the broad outline of the learning teaching process and its internal coherence It aims to be a support for teachers alongside mathematics textbook series Furthermore TAL can provide extra support for teachers if it is incorporated into a circle of implementation The TAL project aims to describe the intermediate attainment targets of primary school mathematics These objectives represent a further development of and a supplement to the previously established core goals for the end of primary school A defining feature of the intermediate attainment targets is that they are embedded in a learning teaching trajectory This is also the reason for calling the project TAL which in Dutch stands for Tussendoelen Annex Leerlijnen in English this means Intermediate Attainment Targets in Learning Teaching Trajectories The middle letter of TAL can also be considered as referring to Afbeeldingen Representations This term indicates that the trajectory description contains many examples of students and teachers behavior which form an integral part of the learning teaching trajectory Eventually learning teaching trajectory descriptions will be developed for all domains of primary school mathematics The present book contains the learning teaching trajectory for the domain of whole number calculation The book contains of one trajectory for the lower grades kindergarten 1 and 2 and grades 1 and 2 and one for the upper grades of primary school grades 3 4 5 and 6 This means that the book covers the learning process in this domain for children ranging from 4 to 12 years of age

Napoli,2021-08-02      **Psychology and Mathematics Education** Gila Hanna,Laura Macchi,Karin Binder,Laura Martignon,Katharina Loibl,2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

**Human Resources Development Review 2008** Andre Kraak,Karen

Press, 2008 Through 25 chapters authored by some of the leading researchers in the field the Human Resources Development Review 2008 provides an extensive overview of the contextual factors driving human resources development in South Africa. A key theme throughout the volume is the importance of a multi-faceted skills development strategy operating at three levels. The first entails high skills policies aimed at expanding export-oriented manufacturing production and services provision particularly in new globally competitive niche areas. The second relates to the economy's ongoing need for intermediate skills as is evident in the shortage of skilled artisans and technologists. Finally the provision of basic entry level skills is important in view of the urgent need for large scale job creation schemes triggered by public sector initiatives to ameliorate high levels of unemployment and despondency especially amongst the youth.
