The Water Cycle

The water cycle is a continuous process that describes how water moves through the air, land, and water. It involves several stages: evaporation, condensation, precipitation, and collection. Water from oceans, rivers, and lakes evaporates into the atmosphere due to heat from the sun. The water vapor then condenses into clouds. Precipitation occurs when water is released from clouds in the form of rain, snow, or hail. The water then collects in bodies of water, such as oceans, rivers, and lakes, and the cycle begins again.
