Language Matters at the Internationalised University Heléna Stakounis, 2025-11-14 When diverse students come together at the internationalised university as a result of an internationalisation strategy the opportunities for intercultural learning cross cultural connections and the promotion of world peace are endless Informed by extensive research on student experience and identity this book provides the expertise to develop a more linguistically just and equitable internationalised university Drawing on empirical evidence global research and personal experience the book argues that language can no

longer be ignored at the internationalised university. Instead plurilingualism should be celebrated with plurilingual approaches employed and a language policy established to ensure language rights are upheld and languages are maintained. It offers a framework for conceptualising the role of language in the student experience at the internationalised university as well as suggestions for how to manage language matters in different areas of the student experience such as in social spaces, the classroom and academic work and groupwork. This book is relevant to university leaders, staff, educators and academics aiming to translate internationalisation practice into policy for a successful student experience. It also provides important insights into why language matters when interacting, teaching and socialising in multilingual internationalised university contexts.

Agricultural, Biosystems, and Biological Engineering Education Umezuruike Linus Opara, 2024-09-30

Agricultural engineering developed as an engineering discipline underpinned by physics, applies scientific principles, knowledge and technological innovations in the agricultural and food industries. During the last century there was exponential growth in engineering developments which has improved human wellbeing and radically changed how humans interact with each other and our planet. Among these, Agricultural Mechanization is ranked among the top 10 in a list of 20 Top Engineering Achievements of the last century that have had the greatest impact on the quality of life. While many success stories abound, the problems of low appeal among students, identity crises and limited job opportunities in many climes continue to trouble the discipline's future in many parts of the world. Yet agriculture and agricultural engineering remain fundamental to assuring food and nutrition security for a growing global population. *Agricultural, Biosystems and Biological Engineering Education* provides the first comprehensive global review and synthesis of different agricultural biosystems and biological engineering education approaches, including a detailed exposition of current practices from different regions. Key Features: Describes novel approaches to curriculum design and reform; Outlines current and emerging epistemology and pedagogies in ABBE education; Provides a framework to grow agricultural engineering in Africa and other developing regions; Highlights the role of ABBE education in the context of the SDGs. Presented in 3 parts and containing 42 chapters, this book covers the historical evolution of agricultural engineering education and discusses the emergence of biological and biosystems engineering education. It will appeal to engineers and other professionals, education planners and administrators and policy makers in agriculture and other biological industries. Chapters 4, 11, 19, 32 and 41 of this book are freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non-Commercial No Derivatives CC BY-NC-ND 4.0 license.
