Community Empowerment, Sustainable Cities, and Transformative Economies Taha Chaiechi, Jacob Wood, 2022-01-12 This edited volume presents the conference papers from the 1st International Conference on Business Economics Management and Sustainability BEMAS organized by the Centre for International Trade and Business in Asia CITBA at James Cook University This book argues that the orthodox methods of external risks climate change adaptation plans and sustainable economic growth in cities are no longer adequate These methods so far have not only ignored the ongoing structural changes associated with economic development but also failed to account for evolving industries composition and the emergence of new comparative advantages and skills Specifically this book looks at the vulnerable communities and exposed areas particularly in urban areas that tend to experience higher susceptibility to external risks such as climate change natural disasters and public health emergencies have been largely ignored in incremental adaptation plans Vulnerable communities and areas not only require different adaptive responses to climate risk but also possess unlocked adaptive capacity that can motivate different patterns of sustainable development to achieve the goals of the 2030 Agenda It is essential therefore to view transformative growth and fundamental reorientation of economic resources as integral parts of the solution Social disorganisation and vulnerability are other undesired outcomes of the unpredictable and widespread external economic shocks This is due to a sudden and tough competition between members of society to acquire precious resources most of which may be depleted during unprecedented events such as

natural disasters or pandemics resulting in an even more chaotic and disorganised conditions      Remote Work Technology

work in the central business district CBD or partly at home Working in the CBD allows them to interact with other commuters which enhances their productivity through a standard production externality but entails commuting costs Switching between modes of labor delivery is costly and workers face idiosyncratic preference shocks for remote work We characterize the parameter set in which the city exhibits multiple stationary equilibria Within this set a coordination mechanism can lead to stationary equilibria in which most workers commute or most of them work partially from home In these cases large shocks in the number of commuters like the recent lockdowns and self isolation generated by the COVID 19 pandemic can result in dynamic paths that make cities converge to a stationary equilibrium with large fractions of remote workers Using cell phone based mobility data for the U S we document that although most cities experienced similar reductions in CBD trips during the pandemic trips in the largest cities have stabilized at levels that are only about 60% of pre pandemic levels In contrast smaller cities have on average returned to pre pandemic levels House price panel data by city show consistent changes in house price CBD distance gradients We estimate the model for 274 U S cities and show that cities that have stabilized at a large fraction of remote work are much more likely to have parameters that result in multiple stationary equilibria Our results imply welfare losses in these cities that average 2.7%
