*Research Handbook on the Law of Artificial Intelligence* Woodrow Barfield, Ugo Pagallo, 2018-12-28 The field of artificial intelligence AI has made tremendous advances in the last two decades but as smart as AI is now it is getting smarter and becoming more autonomous This raises a host of challenges to current legal doctrine including whether AI algorithms should count as speech whether AI should be regulated under antitrust and criminal law statutes and whether AI should be considered as an agent under agency law or be held responsible for injuries under tort law This book contains chapters from US and international law scholars on the role of law in an age of increasingly smart AI addressing these and other issues that are critical to the evolution of the field

Neutrosophic Stance Detection and fsQCA-Based Necessary Condition Analysis for Causal Hypothesis Assessment in AI-Enhanced Learning Jesús Rafael Hechavarría-Hernández, Maikel Y. Leyva Vazquez, Florentin Smarandache, This study addresses the ambiguities in empirical findings on artificial intelligence AI in education by proposing a new methodological framework that combines neutrosophic stance detection and Fuzzy Set Qualitative Comparative Analysis fsQCA This approach explicitly models truth indeterminacy and falsity allowing for the synthesis of contradictory research The authors evaluated four causal hypotheses related to AI based learning using a survey of 24 university participants to explore the necessary conditions for perceived learning improvements The results indicate that the

digital divide is a perfectly necessary condition for effective AI enhanced learning The findings also reveal that AI feedback and AI platform use are necessary though not sufficient for learning improvements but generate significant uncertainty The study concludes that the neutrosophic fsQCA framework is a viable technique for synthesizing ambiguous findings and provides empirical evidence that digital equity and high quality design are crucial for the successful integration of AI in education

How To Take Good Notes Angelos Georgakis, 2017-06-25  
Why would I need a book on how to take notes  
Notes are just notes FALSE Scientists have found that note taking can be as mentally demanding as playing chess can be for an expert  
While you take notes you listen carefully to the lecturer you process the new material you organize it in your working memory and you finally write down what you think is most important  
All this happens while someone is talking at an average speed of three words per second and someone is writing down at an average speed of one third of a word per second  
It doesn't sound easy now does it  
Notes are an important tool for learning  
We don't take notes just to record a few facts so we can review them later  
Learning happens as we take notes  
Taking notes the right way leads to good study practices better performance on exams and long term retention of information  
Note taking comes naturally FALSE Note taking is not obvious or intuitive  
Research has shown that students fail to capture 40% of the main points in a typical lecture  
First year students capture only 11%  
In some studies even the best note takers seem to record less than 75% of the important information  
People think they take good notes until they're told they don't  
Few of us have consciously thought about how we take notes let alone how to improve the quality of them  
We often reproduce the lecturer's phrases verbatim  
We don't save time by systematic use of abbreviations  
We fail to become a good psychologist of our lecturer  
We fail to pick up his enthusiasm  
We fail to interpret the tone of his voice  
We fail to read his body language  
And the result is that we fail to take good notes

Anyway no one taught me how to take notes in school or in college TRUE Educators believe that students are able to assess the quality of their notes and follow good practices However studies have shown the exact opposite The fact that there isn't a course in college dedicated to the art of taking notes or learning in general makes students believe that this is a natural skill that they can perfect with practice over the course of their studies At the end of the day everyone has their own way to take notes TRUE In this book you may be surprised to learn that I don't make any references to different types of note taking systems like those that other books do The reason is that it's the practices behind the note taking that matter most For example you should not copy the lecturer's phrases word for word but generate the main points in your own words And you should leave space on your notes for adding comments and testing yourself later I encourage students to use the Cornell note taking system because it utilizes most of the principles of effective note taking No matter which note taking system you decide to follow the cognitive effort you will have to expend is equally high Note taking may not be rocket science but it's definitely science cognitive science And cognitive science has produced a lot of useful insights that we can use now to take better notes This book presents these insights in simple words so you can make the most of your notes and use them to study effectively The title of this book is How to take good notes However note taking is just one part of the picture Note taking is much broader in the context of this book We take notes so we can interact with them later What matters most is what we do with our notes after we finish taking them Notes can do so many good things for you They hold all your learning efforts Treat them well Look after them
