with new philosophical approaches to investigate institutional complexity for example the ideas of the flat ontology and the assemblage theory The flat ontology approach is applied to the study of human robot institutions as well as to thinking about post anthropocentric institutional design Assemblage thinking allows for a new much less idealistic look at blockchain and smart cities Blockchain as digital institutional technology is considered in the book not from the viewpoint of minimizing transaction costs as is customary in the modern institutional economics but by using the theory of transaction value which focuses on improving the quality of digital transactions The book includes a wide range of examples ranging from metaverses cryptocurrencies and big data to robot rules smart contracts and machine learning algorithms Written for researchers in institutional economics and other social sciences this interdisciplinary book is essential reading for anyone interested in the interplay of institutional and digital change
