*The End of the End of History* Alex Hochuli, George Hoare, 2021-06-25 It's been a long time since a text was so useful in helping me think through our present moment and my role within it. *The End of The End of History* is a clear, powerful and panoramic analysis of our world at the dawn of the 2020s. Vincent Bevins, author *The Jakarta Method*. *The End of History* is over. The idea that Western liberal democracy was the final form of human government has been exposed as bluster. The old order is crumbling before our eyes. Angry anti-politics have arisen to threaten political establishments across the world. Elites have fallen into hysteria, blaming voters, populism, Putin, Facebook, anyone but themselves. They are suffering from Neoliberal Order Breakdown Syndrome. Emerging from four years of interviews and debates on the popular global politics podcast *Aufhebung*, Bunga *The End of the End of History* examines how the political consequences of the 2008 financial crisis have come home to roost. If Trump and Brexit shattered the liberal democratic consensus in 2016, then the global pandemic of 2020 put a final end to the End of History. Politics is back, but it's stranger than ever. *How to Think about Data Science*

Diego Miranda-Saavedra, 2022-12-23 This book is a timely and critical introduction for those interested in what data science is and isn't and how it should be applied. The language is conversational and the content is accessible for readers without a quantitative or computational background, but at the same time it is also a practical overview of the field for the more technical readers. The overarching goal is to demystify the field and teach the reader how to develop an analytical mindset instead of following recipes. The book takes the scientist's approach of focusing on asking the right question at every step, as this is the single most important factor contributing to the success of a data science project. Upon finishing this book, the reader should be asking more questions than I have answered. This book is therefore a practising scientist's approach to explaining data science through questions and examples. **Technical Communication and the Discipline of Content**

Rebekka Andersen, Carlos Evia, 2025-09-22 This book explores how workflows and technologies that treat content as computable data are changing the roles, work activities and outputs of professional technical communicators. It describes how the need for disciplinary approaches to design, manage and deliver content has given rise to the discipline of content, content strategy, content design, content engineering, content operations, that increasingly defines a facet of technical communication work in modern organizations. This book draws on extensive research of the discipline of content and dozens of interviews with industry leaders, hiring managers and academic administrators, educators and alumni. These first-hand accounts outline how roles and activities in content organizations are changing, how these changes are impacting hiring needs and practices, and what skills and qualities students and early career professionals now need to obtain content-related jobs and advance to strategic positions. This book also offers guidance for building curricular pathways that prepare students for work in the discipline of content and offers strategies for enhancing pathways through industry outreach and partnerships. A thorough assessment of the implications of the discipline of content for technical communication, this book will be of interest to

students and scholars in the fields of technical writing professional and public writing content strategy content marketing and information design
