Innovation Ecosystems Daniel Fasnacht, 2018-11-19 Sharing information and knowledge co-innovating with clients, communities and competitors and adopting cognitive technology, robo-advisors, crowdfunding and blockchain reflect current socio-economic behaviour. Emerging growth regions in Asia, demographic shifts, intergenerational wealth transfers and increasing regulations are other trends that amplify each other, disrupt the client journey and affect the entire economy. Moreover, unprecedentedly new market entrants outside the financial sector, be it Amazon, Apple, Google or Facebook, are increasingly expanding their scale and scope to offer financial services. Featuring case studies of Chinese business ecosystems such as Alibaba Ant Financial that have transformed from displaying domestic and organic growth to rapid global expansion, this highly readable book gives you glimpses of how banking services are evolving. We break down everything you need to know about the foray of challenger banks into the financial services. You learn how they link health to wealth, data and gain advantages through analytical capabilities in the race to attract sophisticated clients with highly personalized experiences. The next level of creating and capturing value for clients and businesses involves platform models embedded in cross-sector ecosystems. Digital platforms are the crucial entry point to global markets, creating value for multiple sides. They leverage self-driving ecosystems that go beyond linear value chains applied in traditional business models as the sources of growth in an interconnected world are collaboration and network effects. The winners will be those who open up and engage themselves in an ecosystem that transcends organizational boundaries and performs without sector borders because every actor contributes to the value constellation of the system. The book provides practitioners and scholars with new insights into open and holistic business models where competition in future will be between ecosystems rather than at the company level. It encourages leaders to expand their skills and think through the lens of the ecosystem theory while developing compelling strategies to serve the next generation clients. **Rational Decisions in Organisations** Frédéric Adam, Dorota

Kuchta, Stanisław Stanek, 2022-05-30 Managers in organisations must make rational decisions. Rational decision making is the opposite of intuitive decision making. It is a strict procedure utilising objective knowledge and logic. It involves identifying the problem to solve, gathering facts, identifying options and outcomes, analysing them, considering all the relationships and selecting the decision. Rational decision making requires support methods and software tools. The identification of the problem to solve needs methods that would measure and evaluate the current situation. Identification and evaluation of options and analysis of the available possibilities involves analysis and optimisation methods. Incorporating intuition into rational decision making needs adequate methods that would translate ideas or observed behaviours into hard data. Communication, observation and opinions recording is hardly possible today without adequate software. Information and data

that form the input intermediate variables and the output must be stored managed and made accessible in a user friendly manner Rational Decisions in Organisations Theoretical and Practical Aspects presents selected recent developments in the support of the widely understood rational decision making in organisations illustrated through case studies The book shows not only the variety of perspectives involved in decision making but also the variety of domains where rational decision support systems are needed The case studies present decision making by medical doctors students and managers of various universities IT project teams construction companies banks and small and large manufacturing companies Covering the richness of relationships in which the decisions should and must be taken the book illustrates how modern organisations operate in chains and networks they have multiple responsibilities including social legal business and ethical duties Nowadays managers in organisations can make transparent decisions and consider a multitude of stakeholders and their diverse features incorporating diverse criteria using multiple types and drivers of information and decision making patterns and referring to numerous lessons learned As the book makes clear the marriage of theoretical ideas with the possibilities offered by technology can make the decisions in organisations more rational and at the same time more human
