Contemporary Work and the Future of Employment in Developed Countries Peter Holland, Chris Brewster, 2020-01-23

Whilst only in the second decade of the 21st century we have seen significant and fundamental change in the way we work, where we work, how we work, and the conditions of work. The continued advancements of smart technology and artificial intelligence, globalisation, and deregulation can provide a sleek view of the world of work. This paradigm can deliver the opportunity to both control work and provide new challenges in this emerging virtual and global workplace with 24/7 connectivity as the boundaries of the traditional organisation melt away. Throughout the developed world, the notions of work and employment are becoming increasingly separated, and for some, this will provide new opportunities in entrepreneurial and self-managed work. However, the alternate or bleak perspective is a world of work where globalisation and technology work together to eliminate or minimise employment, underpinning standardised employment with less and less stable or secure work, typified by the rise of the gig economy and creating more extreme work in terms of working hours, conditions, and rewards. These aspects of work are likely to have a significant negative impact on the workforce in these environments. These transformations are creating renewed interest in how work and the workforce is organised and managed, and its relationship to employment in a period when all predictions are that the pace of change will only accelerate.
